## Authorisation

In accordance with Part 3 Division 4 of the Rural Fires Act 1997, this Plan has been prepared by the Riverina Bush Fire Management Committee and has been endorsed at the BFMC meeting on October 21st 2015 for submission to the Bush Fire Coordinating Committee.

### Recommended

JP Smith, Chairperson  
Riverina Bush Fire Management Committee

### Approved

On behalf of the  
NSW Bush Fire Coordinating Committee

## Glossary

**Assets:** anything valued by the community which includes houses, crops, heritage buildings and places, infrastructure, the environment, businesses, and forests, that may be at risk from bush fire.

**Bush Fire:** a general term used to describe fire in vegetation, includes grass fire.

**Bush Fire Hazard:** the potential severity of a bush fire, which is determined by fuel load, fuel arrangement and topography under a given climatic condition.

**Bush Fire Risk:** the chance of a bush fire igniting, spreading and causing damage to the community or the assets they value.

**Bush Fire Risk Management:** a systematic process that provides a range of treatments which contribute to the wellbeing of communities and the environment, which suffer the adverse effects of wildfire/bush fire.

**Bush Fire Threat:** potential bush fire exposure of an asset due to the proximity and type of a hazard and the slope on which the hazard is situated.

**Consequence:** outcome or impact of a bush fire event.

**Community Protection Plan:** a fine scale document that that consists of a Bush Fire Survival Map, a Bush Fire Preparation Map and an Operational Brigade Map.

**Fire Fighting Authorities:** the NSW Rural Fire Service, Fire & Rescue NSW, National Parks & Wildlife Service, and Forestry Corporation of NSW.

**Likelihood:** the chance of a bush fire igniting and spreading.

**Major Bush Fire:** A bush fire which requires the attendance of multiple brigades, or causes damage to property or injury to one or more persons.

**Display area:** geographic area determined by the Bush Fire Management Committee which is used to provide a suitable area and scale for community participation and mapping display purposes.

**Recovery costs:** the capacity of an asset to recover from the impacts of a bush fire.

**Risk Acceptance:** an informed decision to accept the consequences and the likelihood of a particular risk.

**Risk Analysis:** a systematic process to understand the nature of and to deduce the level of risk.

**Risk Assessment:** the overall process of risk identification, risk analysis and risk evaluation.

**Risk Identification:** the process of determining what, where, when, why, and how something could happen.

**Risk Treatment:** the process of selection and implementation of measures to modify risk.

**Vulnerability:** the susceptibility of an asset to the impacts of bush fire.

## Chapter 1. Introduction

### 1.1 Background

Under the *Rural Fires Act 1997* the Bush Fire Coordinating Committee (BFCC) must constitute a Bush Fire Management Committee (BFMC) for each area in the State, which is subject to the risk of bush fires. Each BFMC is required to prepare and submit to the BFCC a draft Bush Fire Risk Management Plan (BFRMP).

A BFRMP is a strategic document that identifies community assets at risk and sets out a five-year program of coordinated multi-agency treatments to reduce the risk of bush fire to the assets. Treatments may include such things as hazard reduction burning, grazing, community education, fire trail maintenance and establishing community fireguard groups.

Annual programs to implement the treatments identified in this plan will be undertaken by the relevant land managers and firefighting authorities.

In exercising its functions under the *Rural Fires Act 1997*, including the preparation of a draft bush fire risk management plan, the Riverina BFMC is required to have regard to the principles of ecologically sustainable development (ESD).

This document and the accompanying maps together form the BFRMP for the Riverina BFMC area.

This BFRMP has been prepared by the Riverina BFMC and covers both public and private lands. This BFRMP must be reviewed and updated within each successive five-year period from the constitution of the BFMC.

The BFCC recognises that climate change has the potential to increase bush fire risk. The risk assessment process applied in this BFRMP is based on current climatic conditions. The BFCC will monitor information on climate change and will modify the process when necessary.

### 1.2 Aim and Objectives

The **aim** of this BFRMP is to minimise the risk of adverse impact of bush fires on life, property and the environment.

The **objectives** of this BFRMP are to:

- reduce the number of human-induced bush fire ignitions that cause damage to life, property and the environment;
- manage fuel to reduce the rate of spread and intensity of bush fires, while minimising environmental/ecological impacts;
- reduce the community's vulnerability to bush fires by improving its preparedness; and
- effectively contain fires with a potential to cause damage to life, property and the environment.

### **1.3 Description of the Riverina BFMC Area**

#### **1.3.1 Location and land tenure**

The Riverina BFMC area is located in the South West of New South Wales and includes the Local Government Areas of Coolamon, Junee, Lockhart and Wagga Wagga.

The area covered by the Riverina BFMC is 1,218,263 hectares and includes the land tenures outlined in Table 1.1.

| <b>Land Manager</b>               | <b>% of BFMC area</b> |
|-----------------------------------|-----------------------|
| National Parks & Wildlife Service | 0.67                  |
| Forestry Corporation              | 1.14                  |
| Crown Lands                       | 2.71                  |
| Local Government                  | 5.0                   |
| Commonwealth                      | 0.24                  |
| Private & other                   | 90.24                 |

**Table 1.1 Land Tenure**

The Department of Defence has two nationally significant defence installations within the Riverina BFMC area. The Kapooka Military Area and Royal Australian Air Force (RAAF) Base Wagga.

#### **1.3.2 Climate and bush fire season**

The typical / average climate in the Riverina BFMC area is temperate, with warm to hot dry summers and cool winters. Rainfall is predominantly autumn and winter, and the bush fire season generally runs from October to March.

Prevailing weather conditions associated with the bush fire season in the Riverina BFMC area are North Westerly winds accompanied by high daytime temperatures and low relative humidity with dry summer storms potentially producing lightning.

#### **1.3.3 Population and demographic information**

The population of the Riverina BFMC area is approximately 77,000 people. The major population centres are Wagga Wagga, Junee, Coolamon, Ganmain, Ardlethan, The Rock and Lockhart. Another 18 urban and village centres are distributed throughout the BFMC area.

### **1.3.4 History of bush fire frequency and ignition cause**

The Riverina BFMC area has on average 200 bush fires per year, of which on average 2 can be considered to be major fires.

The main sources of ignition in the Riverina BFMC area are:

- Lightning, particularly from late spring and summer storms.
- Machinery, particularly agricultural machinery involved in harvesting and haymaking.
- Escapes from legal burning off.
- Incendiarism has been identified as the ignition cause of some bush fires.
- Accidental ignition

## Chapter 2. Identifying and Assessing the Bush Fire Risk

### 2.1 Process

The Australia/New Zealand Standard *AS/NZS 4360: 2004 Risk Management* was used as the basis for the risk assessment process. See Figure 2.1 for the steps involved. For a detailed description of the process undertaken see the Bush Fire Risk Management Planning Guidelines for Bush Fire Management Committees on the RFS website: [www.rfs.nsw.gov.au](http://www.rfs.nsw.gov.au).

Figure 2.1 Overview of the risk assessment process

### 2.2 Communication and Consultation

Community participation is an integral part of risk management. The Community Participation Strategy involved developing and implementing a process to address the needs, issues and concerns of stakeholders within the BFMC area in regards to the BFRMP. See Appendix 1 for the Community Participation Strategy used by the Riverina BFMC in preparing this BFRMP.

## **2.3 Identifying the Bush Fire Risk**

Identifying the level of bush fire risk firstly involved identifying important community assets considered to be at risk from bush fire in the Riverina BFMC area, and then assessing the likelihood and consequence ratings.

### **2.3.1 Assets**

BFMC members and the community, including RFS volunteers, identified assets within the Riverina BFMC that they believed were at risk of bush fire.

The assets were divided into four asset types:

#### **Human settlement**

- Residential areas including urban bushland interface areas and rural properties;
- Special Fire Protection areas including schools, hospitals, nursing homes, and tourist facilities; and
- Other human settlement areas including commercial and industrial areas where distinct from major towns.
- Neighbourhood Safer Place (NSP) is defined by the *Rural Fires Act 1997* as *land or a building designated as a neighbourhood safer place under section 62C*. NSPs provide a place of last resort for people during a bush fire. All designated NSP locations for NSW are available at [www.rfs.nsw.gov.au](http://www.rfs.nsw.gov.au).

#### **Economic**

- Agricultural; e.g. major silos, regional saleyards, cropping/grazing land;
- Commercial/industrial e.g. major industries, waste treatment plants, sawmills;
- Infrastructure e.g. large power lines, gas and oil pipelines, railway lines, electricity substations, communication facilities;
- Tourist and recreational e.g. tourist sites and facilities, resorts, retreats;
- Mines;
- Commercial forests e.g. pine plantations, eucalypt plantations and commercial native forests; and
- Drinking water catchments.

#### **Environmental**

- Threatened species, populations and ecological communities and Ramsar wetlands;
- Locally important species and ecological communities, such as species and ecological communities especially sensitive to fire.

## **Cultural**

- Aboriginal significance – Aboriginal places and items of significance;
- Non-indigenous heritage – places and items arising from the early occupation of NSW by European or other non-indigenous settlers; and
- Other cultural assets – community halls, clubs and recreational facilities.

See Appendix 2 for the full list of assets identified in the Riverina BFMC area. See maps 1-5 for the location of assets to be treated under this BFRMP

### **2.3.2 Assessing the Bush Fire Risk - Consequence**

Once the assets were identified, the consequence of a bush fire impacting on these assets was assessed.

See Appendix 2 for the consequence ratings assigned to each asset identified in the Riverina BFMC area.

The different asset types had different assessment processes used to determine the consequence. These processes are identified below.

#### **Human settlement**

A potential fire behaviour model using vegetation type, slope and separation distance was used to produce a threat rating for human settlement assets. The vulnerability of the asset to a bush fire was also assessed and a rating assigned. These ratings were then used to assess the consequence of a bush fire impacting upon a human settlement asset.

Special Fire Protection (SFP) assets were considered inherently more vulnerable to bush fire due to mobility capacity, knowledge or other issues relating to their inhabitants, (e.g. the elderly, infirm, children or tourists) and therefore stricter requirements for vulnerability assessment and rating were applied.

Due to circumstances surrounding NSPs and their use during a bush fire, stricter requirements for vulnerability assessment and rating will also apply to these assets.

#### **Economic**

The level of economic impact e.g. local, regional or state, as well as the economic recovery costs (how long and complicated a financial recovery will be) of the asset were identified. These ratings were used to assess the consequence of a bush fire impacting upon an economic asset.

#### **Environmental**

Environmental assets with known minimum fire threshold were assessed to determine if they were at risk of a bush fire within the 5 year life of the BFRMP using fire history data. Those environmental assets which were within or above the fire threshold were not assessed in the BFRMP, as the negative impact of a fire within the 5 year period was determined as being low and may even be of benefit to the asset and surrounding habitat.

The vulnerability of an environmental asset was determined by its conservation status and its geographic extent (distribution across the landscape). Vulnerability and potential impact of bush fire were used to assess the consequence of a bush fire impacting upon an environmental asset.

Information on the number and distribution of environmental assets was requested from the Office of Environment and Heritage. It was determined that no treatments could be applied to the assets identified.

### **Cultural**

For non-indigenous historical, Aboriginal and other cultural assets a potential fire behaviour model using fuel load, slope and proximity was used to produce a threat rating. The physical vulnerability of the asset to a bush fire was also assessed. These ratings were then used to assess the consequence of a bush fire impacting upon a cultural asset.

Information on the number and distribution of Aboriginal Heritage assets was requested from the Office of Environment and Heritage and the Wagga Wagga Local Aboriginal Land Council. It was determined that no treatments could be applied to the assets identified.

### **2.3.3 Assessing the Bush Fire Risk - Likelihood**

For all asset types the likelihood of a bush fire occurring was assessed. This involves considering fire history, including ignition cause and patterns, known fire paths, access, containment potential and potential fire run (size of the vegetated area). See Appendix 2 for the likelihood ratings assigned to each asset identified in the Riverina BFMC area.

### **2.3.4 Identifying the level of risk**

The consequence and likelihood ratings were then used to identify the level of risk. See Appendix 2 for the risk ratings assigned to each asset identified in the Riverina BFMC area.

### **2.3.5 Evaluating the Bush Fire Risk**

Once the risk ratings for each asset were identified, they were evaluated to:

- a) confirm that risk levels identified in the risk analysis process are appropriate and reflect the relative seriousness of the bush fire risk;
- b) identify which assets require treatments; and
- c) identify treatment priorities.

### 2.3.6 Prioritising Treatments

No organisation has limitless resources to deal with adverse risk. It is therefore necessary to define priorities. The bush fire risk ratings determined were used to prioritise the risk treatments, i.e. areas of extreme risk were considered first for treatment, then very high, then high then medium then low.

### 2.3.7 Risk Acceptability

Risks below a certain level were assessed as not requiring treatment within the life of this plan. This is due to a combination of risk priority and capacity to undertake the works. Within the Riverina BFMC area the level of acceptability is **Medium**. Areas of medium and low risk, cultural and environmental assets are likely to be managed by routine procedures and so do not require a specific application of resources. However the Riverina BFMC will endeavour to treat acceptable risk if possible.

All NSPs for a BFMC area will require ongoing treatment by the applicable land owner to ensure that the asset remains viable as a place of last resort for people during a bush fire. Therefore, all NSP assets are allocated specific treatments in this Plan, regardless of the level of bush fire risk identified and the risk acceptability nominated by the Riverina BFMC.

For environmental and cultural assets the Riverina BFMC has accepted the level of risk assigned to the identified environmental and cultural assets. In most cases it is not practical to apply specific treatments due to the sensitive nature and/or location of these assets. The protection and management of each asset will be taken into account during bush fire and prescribed burning operations. The Riverina BFMC wide treatments are likely to contribute towards the reduction of risk to these assets.

## **Chapter 3. Treating the Risk**

### **3.1 Bush Fire Management Zones**

Bush Fire Management Zones were identified within the Riverina BFMC area and mapped (see maps 1-5). These zones identify the fire management intent for a specific area. See Table 3.1 for descriptions of the zones and their purposes. The four categories of Bush Fire Management Zones are:

- Asset Protection Zone (APZ);
- Strategic Fire Advantage Zone (SFAZ);
- Land Management Zone (LMZ); and
- Fire Exclusion Zone (FEZ).

Some of these zones (usually Land Management Zones) may be further classified within this category by the land manager, e.g. LMZ -Heritage Management Zone (NPWS).

| <b>Zone</b>                          | <b>Purpose</b>   | <b>Suppression Objective(s)</b>  | <b>Zone characteristics</b>   |
|--------------------------------------|--|--|---|
| <b>Asset Protection Zone</b>         | To protect human life, property and highly valued public assets and values.  | To enable the safe use of <b>Direct Attack</b> suppression strategies within the zone.<br>To minimise bush fire impacts on undefended assets.  | As per RFS document <i>Standards for Asset Protection Zones</i> .   |
| <b>Strategic Fire Advantage Zone</b> | To provide strategic areas of fire protection advantage which will reduce the speed and intensity of bush fires, and reduce the potential for spot fire development;<br><br>To aid containment of wildfires to existing management boundaries. | To improve the likelihood and safe use of:<br><br><b>Parallel Attack</b> suppression strategies within the zone.<br>and/or<br><b>Indirect Attack</b> (back burning) in high to very high fire weather conditions within the zone.<br><br>To reduce the likelihood of:<br>Crown fire development within the zone.<br>and/or<br>Spot fire ignition potential from the zone | Zone width related to suppression objectives and dependant upon: <ul style="list-style-type: none"> <li>• Topography</li> <li>• Aspect</li> <li>• Spotting propensity</li> <li>• Location of adjacent firebreaks</li> <li>• Mosaic pattern of treatment</li> </ul> Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this plan.<br><br>Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFAZ has an OFH of less than high. |
| <b>Land Management Zone</b>          | To meet relevant land management objectives in areas where APZs or SFAZs are not appropriate.  | As per the land management and fire protection objectives of the responsible land management agency.<br><br>To reduce the likelihood of spread of fires.<br><br>To undertake mosaic burning  | As appropriate to achieve land management e.g. heritage and/or fire protection e.g. broad scale mosaic burning objectives.  |
| <b>Fire Exclusion Zone</b>           | To exclude bush fires.   | N/A  | Variable dependant on size of fire sensitive area requiring protection.   |

**Table 3.1 Bush Fire Management Zones: Purpose, objectives and characteristics**

NB: OFH refers the Overall Fuel Hazard Guide as described in the document published by (Dept. of Sustainability and Environment 3<sup>rd</sup> ed. 1999 & NPWS version); State-wide procedures for assessment of fuel hazard will be developed in conjunction with the BFCC.

**Note:** All areas that are not mapped or described as APZs or SFAZs are considered as LMZs.

\*For the purpose of the Bush Fire Environmental Assessment Code:

1. Plantations that are approved under the *Plantations & Reafforestation Act 1999* after closure of the public exhibition period for this BFRMP are considered to be identified in this BFRMP; and
2. Retained vegetation within the aforementioned plantations is considered to be a Strategic Fire Advantage Zone identified in the text of this BFRMP as long as it meets the suppression objectives for SFAZs included in the BFRMP, and is not mapped or otherwise described as a Fire Exclusion Zone in the BFRMP.

### **3.2 BFMC Wide Treatments**

BFMC wide treatments are activities which reduce the overall bush fire risk within the BFMC area and are undertaken on an ongoing basis as part of normal business. These treatments are not linked to specific assets in the BFRMP, rather they are applied across all or part of the BFMC area as designated by legislation or agency policy. BFMC wide treatments include the following:

- **Reviewing the bush fire prone land map**

These maps identify bush fire prone land and are used to trigger whether a development application is assessed using *Planning for Bush Fire Protection*<sup>1</sup>.

- **Ensuring developments in bush fire prone land comply with *Planning for Bush Fire Protection***

This assessment process requires new applications for development to include bush fire protection measures.

- **Using the Local Environment Plan/s (LEPs) to control developments in areas with a bush fire risk**

LEPs can be used to exclude development in extreme bush fire risk areas or where bush fire protection measures cannot be incorporated.

- **Varying the standard bush fire danger period as required**

In years where the weather is particularly adverse the bush fire danger period may be brought in early or extended. This is assessed every year by the BFMC.

- **Requiring permits during the bush fire danger period**

In the bush fire danger period a fire safety permit is required to light a fire in the open. Permits specify conditions such as firefighting equipment that must be on site, or restrict burns based on weather conditions.

---

<sup>1</sup> NSW Rural Fire Service 2006 *Planning for Bush Fire Protection: A guide for councils, planners, fire authorities and developers*.

- **Prosecution of arsonists/offenders**

Under the *Rural Fires Act 1997* persons may be prosecuted for breaching the conditions on a fire permit, lighting a fire during a Total Fire Ban, allowing fire to escape their property, or other breaches of the Act.

- **Investigation of bush fire cause**

All bush fires which do not have a known cause are investigated to identify how they started.

- **Normal fire suppression activities**

Responding to bush fire is a normal business activity for the firefighting authorities.

- **Assessing and managing compliance with strategic firefighting resource allocation provisions**

Strategic firefighting resource allocation provisions is the process used to identify the number of stations, brigades and appliances required in an area, and considers members, training, assets and hazards.

- **Preparation of a S52 Operations Coordination Plan**

The Operations Coordination Plan is prepared biannually and sets out how coordinated firefighting will occur. It includes specific operational restrictions on firefighting techniques in certain areas, where fires will be managed from, and how agencies involved can communicate during operations.

- **Fire Management Plans or Plans of Management**

Some land management agencies have developed fire management plans or plans of management with specific fire or fuel management strategies, for example a Forests NSW Regional Fuel Management Risk Plan, a NPWS Fire Management Strategy. A current example includes The Rock Nature Reserve Fire Management Strategy 2014. These publicly exhibited plans form the basis for operational fire planning on public parks, reserves and forests.

- **Bush Fire Hazard Complaints**

If someone is concerned about possible bush fire hazards on a neighbouring property or any other land, then this can be reported to the RFS Commissioner or their local RFS Fire Control Centre. The complaint will be investigated and may result in a notice being issued to the landowner or manager to reduce the hazard.

### 3.3 Asset Specific Treatments

There are five broad strategy groups available to treat the bush fire risk to assets identified in the BFRMP.

The types of asset specific treatments in each strategy group used in the Riverina BFMC area are listed below. A full list of the treatment strategies in the Riverina BFMC area are in Appendix 3.

| <b>Strategy</b>      | <b>Targeted treatments used in the <i>Riverina BFMC</i> area</b>   |
|----------------------|--|
| Ignition Management  | Close identified vulnerable areas on days of Total Fire Ban.<br>Develop and implement duty roster for manning of fire tower.   |
| Hazard Reduction     | Annual inspection and slashing or spraying of APZ & SFAZs.<br>Annual inspection and maintenance of APZ & SFAZs.<br>Inspect and maintain crossings and yards if required.<br>Implement burning program.<br>Implement fuel management program.<br>Maintain fuels in accordance with Guidelines |
| Community Engagement | Contact Firewise groups and visit on request<br>School visits<br>Complete school Bush Fire Emergency Management Plan<br>Annual review of school BFEMP  |
| Property Planning    | Assist Councils in maintaining Bush Fire Prone Land Maps<br>Provide advice on planning and construction<br>Develop and implement Community Protection Plan   |
| Preparedness         | Annual inspection prior to BFDP.<br>Monitor and patrol network assets  |

**Table 3.2 Asset specific treatments used in the Riverina BFMC area**

### 3.4 Fire Thresholds

The vegetation in the Riverina BFMC area was classified into fire threshold categories (Table 3.3\*).

| Vegetation formation                              | Minimum SFAZ Threshold | Minimum LMZ Threshold | Maximum Threshold | Notes   |
|---|------------------------|-----------------------|-------------------|---|
| Rainforest  | NA                     | NA                    | NA                | Fire should be avoided.   |
| Alpine complex                                    | NA                     | NA                    | NA                | Fire should be avoided.   |
| Wet Sclerophyll forest (shrubby subformation)     | 25                     | 30                    | 60                | Crown fires should be avoided in the lower end of the interval range.   |
| Wet Sclerophyll forest (grassy subformation)      | 10                     | 15                    | 50                | Crown fires should be avoided in the lower end of the interval range.   |
| Grassy woodland                                   | 5                      | 8                     | 40                | Minimum interval of 10 years should apply in the southern Tablelands area. Occasional intervals greater than 15 years may be desirable.   |
| Grassland   | 2                      | 3                     | 10                | Occasional intervals greater than 7 years should be included in coastal areas. There was insufficient data to give a maximum interval; available evidence indicates maximum intervals should be approximately 10 years. |
| Dry sclerophyll forest (shrub/grass subformation) | 5                      | 8                     | 50                | Occasional intervals greater than 25 years may be desirable.  |
| Dry sclerophyll forest (shrub subformation)       | 7                      | 10                    | 30                | Occasional intervals greater than 25 years may be desirable.  |
| Heathlands  | 7                      | 10                    | 30                | Occasional intervals greater than 20 years may be desirable.  |
| Freshwater wetlands                               | 6                      | 10                    | 35                | Occasional intervals greater than 30 years may be desirable.  |
| Forested wetlands                                 | 7                      | 10                    | 35                | Some intervals greater than 20 years may be desirable.  |
| Saline wetlands                                   | NA                     | NA                    | NA                | Fire should be avoided.   |
| Semi-arid woodlands (grassy subformation)         | 6                      | 9                     | No max            | Not enough data for a maximum fire interval.  |
| Semi-arid woodlands (shrubby subformation)        | 10                     | 15                    | No Max            | Not enough data for a maximum fire interval.  |
| Arid shrublands (chenopod subformation)           | NA                     | NA                    | NA                | Fire should be avoided.   |
| Arid shrublands (acacia subformation)             | 10                     | 15                    | No Max            | Not enough data for a maximum fire interval.  |

**Table 3.3 Fire Thresholds for Vegetation Categories**

### ***3.5 Annual Works Programs***

The land management agencies and firefighting authorities responsible for implementing the treatments identified in this plan will include those treatments in their annual works programs detailing how, when, and where the required activities will be undertaken.

### ***3.6 Implementation***

When the treatments identified in this BFRMP are implemented there are a number of issues that need to be considered by the responsible agency including environmental assessments and approvals, smoke management and prescribed burn plans.

## **Chapter 4. Performance Monitoring and Reviewing**

### **4.1 Review**

This BFRMP must be reviewed and updated within each successive five-year period from the constitution of the BFMC. The Riverina BFMC will also review this plan as necessary to account for any changes in context or risk. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

### **4.2 Monitoring**

The BFMC is required to monitor progress towards the completion of treatment works listed in the BFRMP, and the timeliness of the works.

### **4.3 Reporting**

The BFMC is required to report annually to the BFCC on its progress in implementing the bush fire risk management activities identified in this plan.

### **4.4 Performance Measurements**

State wide performance measurements which are linked to the BFRMP have been identified by the BFCC. All BFMCs must use these to monitor and report on their success in reducing the bush fire risk in their BFMC area.

# Riverina BFMC Bush Fire Risk Management Plan 2018

Coolamon - Map Display Area

Map 1 of 5

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Riverina Bush Fire Management Committee (BFMC) pursuant to section 52 of the Rural Fires Act 1997.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

- The objectives of this BFRMP are to:
- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
  - manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
  - reduce the community's vulnerability to bush fires by improving its preparedness; and
  - effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Riverina BFMC, covering the local government area(s) of Coolamon, Junee, Lockhart and Wagga Wagga. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

**Review**  
Under the Rural Fires Act 1997 this plan must be reviewed and updated within each successive five year period following the constitution of the BFMC. The Riverina BFMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

**Assets**  
This BFRMP identifies the assets that are considered by the Riverina BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFMC area identified as requiring treatments are listed in the assets table. Other assets within the BFMC area that were assessed as not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number "NA" denotes non-spatial assets.

- Treatments**  
Specific treatments assigned to assets in the Riverina area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFMC wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFMC area are:
- reviewing the bush fire prone land map;
  - ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
  - using the Local Environment Plan's (LEPs) to control development in areas with a bush fire risk;
  - varying the standard bush fire danger period as required;
  - requiring permits during bush fire danger periods;
  - prosecution of arsonists/offenders;
  - investigation of bush fire cause;
  - normal fire suppression activities;
  - assessing and managing compliance with strategic fire-fighting resource allocation management systems;
  - preparation of a S&S Operations Coordination Plan;

Note on LMZ: All areas not specifically mapped as an APZ, SFAZ or FEZ are considered as LMZ for this risk management plan. For areas identified by an LMZ polygon on the map, please refer to the BFRMP document for the specific land management objectives.

| Zone                                 | Purpose   | Suppression   | Zone  |
|--------------------------------------|---|---|---|
| <b>Asset Protection Zone</b>         | To protect human life, property and highly valued public assets and values.   | To enable the safe use of <b>Direct Attack</b> suppression strategies within the zone. To minimise bush fire impacts on undefended assets.  | As per RFS document Standards for Asset Protection Zones.   |
| <b>Strategic Fire Advantage Zone</b> | To provide strategic areas of fire protection advantage which will reduce the speed and intensity of bush fires, and reduce the potential for spot fire development. To aid containment of wildfires to existing management boundaries. | To improve the likelihood and safe use of <b>Parallel Attack</b> suppression strategies within the zone. <b>Indirect Attack</b> (back burning) in high to very high fire weather conditions within the zone. To reduce the likelihood of Crown fire development within the zone. and/or Spot fire ignition potential from the zone. | Zone width related to suppression objectives and dependant upon:<br>- Topography<br>- Aspect<br>- Spotting propensity<br>- Location of adjacent fire breaks<br>- Mosaic pattern of treatment<br>Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this plan. Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFAZ has an OFH of less than high. |
| <b>Land Management Zone</b>          | To meet relevant land management objectives in area where APZs or SFAZs are not appropriate.  | To reduce the likelihood of spread of fires. To undertake mosaic burning.   | As appropriate to achieve land management and fire protection objectives of the responsible land management agency. e.g. broad scale mosaic burning objectives.   |
| <b>Fire Exclusion Zone</b>           | To exclude bush fires.  | NA  | Variable dependant on size of fire sensitive area requiring protection.   |

# Riverina BFMC Bush Fire Risk Management Plan 2018

Junee - Map Display Area

Map 2 of 5

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Riverina Bush Fire Management Committee (BFMC) pursuant to section 52 of the Rural Fires Act 1997.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

The objectives of this BFRMP are to:

- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
- manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
- reduce the community's vulnerability to bush fires by improving its preparedness; and
- effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Riverina BFMC, covering the local government areas of Coolamon, Junee, Lockhart and Wagga Wagga. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

**Review**  
Under the Rural Fires Act 1997 this plan must be reviewed and updated within each successive five year period following the constitution of the BFMC. The Riverina BFMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

**Assets**  
This BFRMP identifies the assets that are considered by the Riverina BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFMC area identified as requiring treatments are listed in the assets table. Other assets within the BFMC area that were assessed as not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number "NA" denotes non-spatial assets.

**Treatments**  
Specific treatments assigned to assets in the Riverina area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFMC wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFMC area are:

- reviewing the bush fire prone land map;
- ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
- using the Local Environment Plan's (LEPs) to control development in areas with a bush fire risk;
- varying the standard bush fire danger period as required;
- requiring permits during bush fire danger periods;
- prosecution of arsonists/offenders;
- investigation of bush fire cause;
- normal fire suppression activities;
- assessing and managing compliance with strategic fire-fighting resource allocation management systems;
- preparation of a S52 Operations Coordination Plan;

Note on LMA: All areas not specifically mapped as an APZ, SFAZ or FEZ are considered as LMAZ for this risk management plan. For areas identified by an LMAZ polygon on the map, please refer to the BFRMP document for the specific land management objectives.

| Zone                                 | Purpose   | Suppression   | Zone  |
|--------------------------------------|---|---|---|
| <b>Asset Protection Zone</b>         | To protect human life, property and highly valued public assets and values.   | To enable the safe use of <b>Direct Attack</b> suppression strategies within the zone. To minimise bush fire impacts on undefended assets.  | As per RFS document Standards for Asset Protection Zones.   |
| <b>Strategic Fire Advantage Zone</b> | To provide strategic areas of fire protection advantage which will reduce the speed and intensity of bush fires, and reduce the potential for spot fire development. To aid containment of wildfires to existing management boundaries. | To improve the likelihood and safe use of <b>Parallel Attack</b> suppression strategies within the zone. <b>Indirect Attack</b> (back burning) in high to very high fire weather conditions within the zone. To reduce the likelihood of Crown fire development within the zone. and/or Spot fire ignition potential from the zone. | Zone width related to suppression objectives and dependant upon:<br>- Topography<br>- Aspect<br>- Spotting propensity for spot fire<br>- Location of adjacent fire breaks<br>- Mosaic pattern of treatment<br>Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this plan. Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFAZ has an OFH of less than high. |
| <b>Land Management Zone</b>          | To meet relevant land management objectives in area where APZs or SFAZs are not appropriate.  | As per the land management and fire protection objectives of the responsible land management agency. To reduce the likelihood of spread of fires. To undertake mosaic burning.  | As appropriate to achieve land management, e.g. heritage and/or fire protection e.g. broad scale mosaic burning objectives.   |
| <b>Fire Exclusion Zone</b>           | To exclude bush fires.  | NA  | Variable dependant on size of fire sensitive area requiring protection.   |

# Riverina BFMC Bush Fire Risk Management Plan 2018

Wagga West - Map Display Area  
Map 3 of 5

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Riverina Bush Fire Management Committee (BFMC) pursuant to section 52 of the Rural Fires Act 1997.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

The objectives of this BFRMP are to:

- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
- manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
- reduce the community's vulnerability to bush fires by improving its preparedness; and
- effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Riverina BFMC, covering the local government area(s) of Coolamon, Junee, Lockhart and Wagga Wagga. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

**Review**  
Under the Rural Fires Act 1997 this plan must be reviewed and updated within each successive five year period following the constitution of the BFMC. The Riverina BFMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

**Assets**  
This BFRMP identifies the assets that are considered by the Riverina BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFMC area identified as requiring treatments are listed in the assets table. Other assets within the BFMC area that were assessed but not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number "NA" denotes non-spatial assets.

**Treatments**  
Specific treatments assigned to assets in the Riverina area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFMC wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFMC area are:

- reviewing the bush fire prone land map;
- ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
- using the Local Environment Plan's (LEPs) to control development in areas with a bush fire risk;
- varying the standard bush fire danger period as required;
- requiring permits during bush fire danger periods;
- prosecution of arsonists/offenders;
- investigation of bush fire cause;
- normal fire suppression activities;
- assessing and managing compliance with strategic fire-fighting resource allocation management systems;
- preparation of a S&S Operations Coordination Plan;

Note on LMZ: All areas not specifically mapped as an APZ, SFZ or FEZ are considered as LMZ for this risk management plan. For areas identified by an LMZ polygon on the map, please refer to the BFRMP document for the specific land management objectives.

| Zone                                 | Purpose   | Suppression   | Zone  |
|--------------------------------------|---|---|---|
| <b>Asset Protection Zone</b>         | To protect human life, property and highly valued public assets and values.   | To enable the safe use of <b>Direct Attack</b> suppression strategies within the zone. To minimise bush fire impacts on undefended assets.  | As per RFS document Standards for Asset Protection Zones.   |
| <b>Strategic Fire Advantage Zone</b> | To provide strategic areas of fire protection advantage which will reduce the speed and intensity of bush fires, and reduce the potential for spot fire development. To aid containment of wildfires to existing management boundaries. | To improve the likelihood and safe use of <b>Parallel Attack</b> suppression strategies within the zone. <b>Indirect Attack</b> (back burning) in high to very high fire weather conditions within the zone. To reduce the likelihood of Crown fire development within the zone. and/or Spot fire ignition potential from the zone. Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFZ has an OFH of less than high. | Zone width related to suppression objectives and dependant upon:<br>- Topography<br>- Aspect<br>- Location of adjacent fire breaks<br>- Mosaic pattern of treatment<br>Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this plan. |
| <b>Land Management Zone</b>          | To meet relevant land management objectives in area where APZs or SFZs are not appropriate.   | To reduce the likelihood of spread of fires. To undertake mosaic burning.   | As appropriate to achieve land management and fire protection objectives of the responsible land management agency. e.g. broad scale mosaic burning objectives.   |
| <b>Fire Exclusion Zone</b>           | To exclude bush fires.  | NA  | Variable dependant on size of fire sensitive area requiring protection.   |

# Riverina BFMC Bush Fire Risk Management Plan 2018

Wagga East - Map Display Area  
Map 4 of 5

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Riverina Bush Fire Management Committee (BFMC) pursuant to section 52 of the Rural Fires Act 1997.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

The objectives of this BFRMP are to:

- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
- manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
- reduce the community's vulnerability to bush fires by improving its preparedness; and
- effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Riverina BFMC, covering the local government areas of Coolamon, Junee, Lockhart and Wagga Wagga. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

**Review**

Under the Rural Fires Act 1997 this plan must be reviewed and updated within each successive five year period following the constitution of the BFMC. The Riverina BFMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

**Assets**

This BFRMP identifies the assets that are considered by the Riverina BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFMC area identified as requiring treatments are listed in the assets table. Other assets within the BFMC area that were assessed but not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number "NA" denotes non-spatial assets.

**Treatments**

Specific treatments assigned to assets in the Riverina area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFMC wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFMC area are:

- reviewing the bush fire prone land map;
- ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
- using the Local Environment Plan's (LEPs) to control development in areas with a bush fire risk;
- varying the standard bush fire danger period as required;
- requiring permits during bush fire danger periods;
- prosecution of arsonists/offenders;
- investigation of bush fire cause;
- normal fire suppression activities;
- assessing and managing compliance with strategic fire-fighting resource allocation management systems;
- preparation of a S2 Operations Coordination Plan;

Note on LMZ: All areas not specifically mapped as an APZ, SFZ or FEZ are considered as LMZ for this risk management plan. For areas identified by an LMZ polygon on the map, please refer to the BFRMP document for the specific land management objectives.

| Zone                                 | Purpose  | Suppression   | Zone   |
|--------------------------------------|--|---|--|
| <b>Asset Protection Zone</b>         | To protect human life, property and highly valued public assets and values.  | To enable the safe use of <b>Direct Attack</b> suppression strategies within the zone. To minimise bush fire impacts on undefended assets.  | As per RFS document Standards for Asset Protection Zones.  |
| <b>Strategic Fire Advantage Zone</b> | To provide strategic areas of fire protection advantage which will reduce the speed and intensity of bush fire, and reduce the potential for spot fire development. To aid containment of wildfires to existing management boundaries. | To improve the likelihood and safe use of <b>Parallel Attack</b> suppression strategies within the zone. <b>Indirect Attack</b> (back burning) in high to very high fire weather conditions within the zone. To reduce the likelihood of Crown fire development within the zone. and/or Spot fire ignition potential from the zone. | Zone width related to suppression objectives and dependant upon:<br>- Topography<br>- Aspect<br>- Spotting propensity for spot fire<br>- Location of adjacent fire breaks<br>- Mosaic pattern of treatment<br>Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this plan. Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFZ has an OFH of less than high. |
| <b>Land Management Zone</b>          | To meet relevant land management objectives in area where APZs or SFZs are not appropriate.  | To reduce the likelihood of spread of fires. To undertake mosaic burning.   | As appropriate to achieve land management and fire protection objectives of the responsible land management agency. To reduce the likelihood of spread of fires. To undertake mosaic burning.  |
| <b>Fire Exclusion Zone</b>           | To exclude bush fires.   | NA  | Variable dependant on size of fire sensitive area requiring protection.  |

# Riverina BFMC Bush Fire Risk Management Plan 2018

Lockhart - Map Display Area

Map 5 of 5

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Riverina Bush Fire Management Committee (BFMC) pursuant to section 52 of the Rural Fires Act 1997.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

- The objectives of this BFRMP are to:
- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
  - manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
  - reduce the community's vulnerability to bush fires by improving its preparedness; and
  - effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Riverina BFM, covering the local government areas of Coolamon, Junee, Lockhart and Wagga Wagga. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFM area, the assets assessed and the risk assessment process used.

**Review**  
Under the Rural Fires Act 1997 this plan must be reviewed and updated within each successive five year period following the constitution of the BFM. The Riverina BFM will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFM area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

**Assets**  
This BFRMP identifies the assets that are considered by the Riverina BFM and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFM area identified as requiring treatments are listed in the treatments table. Other assets within the BFM area that were assessed as not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number "NA" denotes non-spatial assets.

- Treatments**  
Specific treatments assigned to assets in the Riverina area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFM wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFM area are:
- reviewing the bush fire prone land map;
  - ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
  - using the Local Environment Plan's (LEPs) to control development in areas with a bush fire risk;
  - varying the standard bush fire danger period as required;
  - requiring permits during bush fire danger periods;
  - prosecution of arsonists/offenders;
  - investigation of bush fire cause;
  - normal fire suppression activities;
  - assessing and managing compliance with strategic fire-fighting resource allocation management systems;
  - preparation of a S&S Operations Coordination Plan;

Note on LMZ: All areas not specifically mapped as an APZ, SFZ or FEZ are considered as LMZ for this risk management plan. For areas identified by an LMZ polygon on the map, please refer to the BFRMP document for the specific land management objectives.

| Zone                                 | Purpose   | Suppression  | Zone   |
|--------------------------------------|---|--|--|
| <b>Asset Protection Zone</b>         | To protect human life, property and highly valued public assets and values.   | To enable the safe use of <b>Direct Attack</b> suppression strategies within the zone. To minimise bush fire impacts on undefended assets.   | As per RFS document Standards for Asset Protection Zones.  |
| <b>Strategic Fire Advantage Zone</b> | To provide strategic areas of fire protection advantage which will reduce the speed and intensity of bush fires, and reduce the potential for spot fire development. To aid containment of wildfires to existing management boundaries. | To improve the likelihood and safe use of <b>Parallel Attack</b> suppression strategies within the zone. <b>Indirect Attack</b> (back burning) in high to very high fire weather conditions within the zone. To reduce the likelihood of Crown fire development within the zone. Spot fire ignition potential from the zone. | Zone width related to suppression objectives and dependant upon:<br>- Topography<br>- Aspect<br>- Spotting propensity for spot fire<br>- Location of adjacent fire breaks<br>- Mosaic pattern of treatment<br>Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this plan. Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFZ has an OFH of less than high. |
| <b>Land Management Zone</b>          | To meet relevant land management objectives in area where APZs or SFZs are not appropriate.   | As per the land management and fire protection objectives of the responsible land management agency. To reduce the likelihood of spread of fires. To undertake mosaic burning.   | As appropriate to achieve land management, e.g. heritage and/or fire protection e.g. broad scale mosaic burning objectives.  |
| <b>Fire Exclusion Zone</b>           | To exclude bush fires.  | NA   | Variable dependant on size of fire sensitive area requiring protection.  |

## Fire Threshold (August 2017)\*

\*Calculated using Vegetation Formations of NSW (version 3.00)

Vegetation categories (Keith, D. 2004) and Time Since Fire datasets have been combined to produce this Fire Threshold map. Table 1 (interpretation of Kenny et al. 2004; NSW RFS, 2006) lists the Fire Threshold values used for each vegetation community to calculate the Fire Threshold categories.

Each vegetation community has a minimum and maximum fire regime threshold (Kenny et al. 2004). A fire interval between these thresholds (within threshold) is the time between fire events that a specific plant or vegetation community needs, to avoid being at risk from a decline in biodiversity. A decline in biodiversity usually occurs as a result of either too infrequent (above maximum threshold) or too frequent burning (below minimum threshold). Some vegetation formations are classified as fire intolerant and therefore do not have a fire threshold.

Fire frequency, fire intensity, season, extent (patchiness) and type of fire also influence whether or not a specific fire event has caused or is likely to cause a decline in biodiversity.

The map will be used to assist the BFM in developing appropriate fire management strategies to reduce the risk of assets being affected by wildfire, and where possible, not impacting negatively on local biodiversity.

Additional information about the fire threshold map may be found in the document 'Bush Fire Risk Management Planning Guidelines for BFM's'.
