Authorisation

In accordance with Part 3 Division 4 of the *Rural Fires Act 1997*, this Plan has been prepared by the Blue Mountains Bush Fire Management Committee and has been endorsed at the BFMC meeting on 13th November 2014 for submission to the Bush Fire Coordinating Committee.

Recommended

 5-1-2015

Glossary

Assets: anything valued by the community which includes, but not limited to: houses; crops; heritage buildings and places; infrastructure; the environment; businesses; and forests that may be at risk from bush fire.

Bush Fire: a general term used to describe fire in vegetation, including grass fire.

Bush Fire Hazard: the potential severity of a bush fire, which is determined by fuel load, fuel arrangement and topography under a given climatic condition.

Bush Fire Risk: the chance of a bush fire igniting, spreading and causing damage to the community or the assets they value.

Bush Fire Risk Management: a systematic process that provides a range of treatments which contribute to the well being of communities and the environment, which suffer the adverse effects of wildfire/bush fire.

Bush Fire Threat: potential bush fire exposure of an asset due to the proximity and type of a hazard and the slope on which the hazard is situated.

Consequence: the outcome or impact of a bush fire event.

Display area: geographic area determined by the Bush Fire Management Committee which is used to provide a suitable area and scale for community participation and mapping display purposes.

Fire Fighting Authorities: the NSW Rural Fire Service, Fire and Rescue NSW, the National Parks and Wildlife Service and Forests NSW.

Fire Threshold: the upper and lower time limits or range of fire intervals recommended to support ecologically sustainable fire management of native vegetation.

Likelihood: the chance of a bush fire igniting and spreading.

Major Bush Fire: a bush fire that requires the attendance of multiple brigades, or causes damage to property or injury to one or more persons.

Recovery costs: the capacity of an asset to recover from the impacts of a bush fire.

Risk Acceptance: an informed decision to accept the consequences and the likelihood of a particular risk.

Risk Analysis: a systematic process to understand the nature of and to deduce the level of risk.

Risk Assessment: the overall process of risk identification, risk analysis and risk evaluation.

Risk Identification: the process of determining what, where, when, why, and how something could happen.

Risk Treatment: the process of selection and implementation of measures to modify risk.

Vulnerability: the susceptibility of an asset to the impacts of bush fire.

Chapter 1. Introduction

1.1 Background

Under the *Rural Fires Act 1997*, the Bush Fire Coordinating Committee (BFCC) must constitute a Bush Fire Management Committee (BFMC) for each area in the State that is subject to the risk of bush fires. Each BFMC is required to prepare and submit to the BFCC a draft Bush Fire Risk Management Plan (BFRMP) for approval.

A BFRMP is a strategic document that identifies community assets at risk and sets out a five-year program of coordinated multi-agency treatments to reduce the risk of bush fire to the assets. Treatments may include such things as mechanical hazard reduction (e.g. slashing, mowing), hazard reduction burning, grazing, community education and fire trail maintenance.

Annual programs to implement the treatments identified in this Plan will be undertaken by the relevant land managers and fire fighting authorities.

In exercising its functions under the *Rural Fires Act 1997*, including the preparation of a draft BFRMP, the Blue Mountains BFMC is required to have regard to the principles of ecologically sustainable development (ESD).

This document and the accompanying maps together form the BFRMP for the Blue Mountains BFMC area.

This BFRMP has been prepared by the Blue Mountains BFMC and covers both public and private lands. This BFRMP must be reviewed and updated within each successive five-year period from the constitution of the BFMC.

The BFCC recognises that climate change has the potential to increase bush fire risk. The risk assessment process applied in this BFRMP is based on current climatic conditions. The BFCC will monitor information on climate change and will modify the process when necessary.

1.2 Aim and Objectives

The aim of this BFRMP is to minimise the risk of adverse impact of bush fires on life, property and the environment.

The objectives of this BFRMP are to:

- reduce the number of bush fire ignitions that cause damage to life, property and the environment;
- manage fuel to reduce the rate of spread and intensity of bush fires, while minimising environmental and ecological impacts;
- reduce the community's vulnerability to bush fires by improving its preparedness;
- effectively contain fires which have the potential to cause damage to life, property and the environment.

1.3 Description of the Blue Mountains BFMC and Greater Blue Mountains World Heritage Areas

1.3.1 Location and land tenure

The Blue Mountains BFMC area is located 55 kilometres west of the Sydney Metropolitan Area and stretches to 95 kilometres from Sydney GPO, New South Wales, and includes the Local Government Area of Blue Mountains City Council.

The Blue Mountains settlements are mostly confined to a narrow plateau / ridge system gradually rising from the Cumberland Plain to the Great Dividing Range north of Lithgow. The climate, terrain, vegetation and development pattern varies along this plateau. The exception is the Megalong Valley which is below the escarpment. The settlements border the Blue Mountains National Park which is part of the Greater Blue Mountains World Heritage Area (GBMWHa).

The GBMWHa was inscribed on the World Heritage List in 2000. The area was listed because it:

- Possesses outstanding examples of ecological and biological processes significant in the evolution of ecosystems and communities of plants and animals; and
- Contains important and significant natural habitats for the conservation of biological diversity, including threatened species of outstanding value.

The outstanding natural values of the Blue Mountains have evolved under a long history of varying fire regimes and require the management of fire on a landscape level such that the appropriate fire regimes are maintained to protect vegetation communities and the fauna species they support. These fire regimes are detailed in the fire management strategy for the respective National Park that together comprises the World Heritage Area.

The management of the GBMWHa fragile ecosystem, while maintaining sustainable economic development, is the principle bush fire management challenge for the National Parks and Wildlife Service.

The City of Blue Mountains is regarded as a unique place and is located on the traditional lands of the Darug, Wiradjuri and Gundungurra Nations.

The area covered by the Blue Mountains BFMC is 143,168 hectares and includes the land tenures outlined in Table 1.1.

Land Manager	% of BFMC area
National Parks & Wildlife Service	74.2
Department of Lands	2.8
Local Government	4.2
Private	15.9
All other	2.9

Table 1.1 Land Tenure

1.3.2 Climate and bush fire season

The typical/ average climate in the Blue Mountains BFMC area is warm temperate with an average summer-autumn rainfall peak associated with summer storms (November to June) and a drier early spring. The climate in the higher mountain areas can tend towards cool temperate. The bush fire season generally runs from September through to February.

Prevailing weather conditions associated with elevated fire danger conditions in the Blue Mountains BFMC area are westerly or north-westerly winds which, if associated with drought-like conditions, can lead to severe weather and fire behaviour.

1.3.3 Population and demographic information

The population of the Blue Mountains BFMC area is approximately 78,500 and is spread across 26 towns and villages. These diverse centres include highly urbanised towns and isolated rural townships. There are approximately 33,000 dwellings and 18 key commercial/industrial precincts prone to bush fire impact. The total Gross Regional Product that is generated for the area is \$1.96 billion. The major population centres are Springwood and Katoomba/Leura.

The following issues have been identified within the Blue Mountains BFMC area as potentially impacting on the ability of certain sections of the community to prepare themselves for bush fire:

1. The key industry in the Blue Mountains is tourism. The major retail commercial centre is Katoomba, a popular destination for day-trippers and overnight visitors. The Tourism & Hospitality Sector is the primary economic driver for the region with 3 million visitors generating over \$550 million in revenue per annum and employing over 13% of the regions workforce. The Blue Mountains area is one of Australia's top three tourist attractions with the peak periods being June/July, October and January/February. Tourist activity is concentrated mainly in the upper mountains with short stay visits; therefore, there are many holiday homes, B & B's and guest accommodation.
2. There is a significantly higher concentration of residents in the lower mountains, comprising mainly young families. The upper mountains have a higher proportion of older residents relatively dispersed throughout the area.
3. The estimated total number of employed persons in the Blue Mountains is 41,600 with more than half of whom leave the Blue Mountains BFMC area daily for work.
4. Primary transportation corridors within the Blue Mountains BFMC area includes:
 - i. The Great Western Highway (60km);
 - ii. Bells Line of Road (24km);
 - iii. Darling Causeway (10km); and
 - iv. Main Western Railway Line (75km)

This exposes travellers between townships to significant bushland interface areas.

1.3.4 History of bush fire frequency and ignition cause

The Blue Mountains BFMC area has had at least seven major fire events over the past

twenty years. Throughout this time, bush fires have been constant, although the number has varied each year according to seasonal conditions.

The main sources of ignition in the Blue Mountains BFMC area:

- Human – the most likely wildfire ignition risk is from arson. Deliberately lit fires either within the urban areas or close to highways, roads and tracks. Other human-caused fires are not as common as arson. Campfires are mainly found along rivers, camp grounds and walking tracks in the more popular recreational areas of the Blue Mountains National Park whereas ignitions from domestic causes are much higher within urban areas. Escapes from hazard reductions are rare.
- Lightning – ignitions from lightning strikes occur throughout the mountains particularly in spring and summer when storms are more common.

Chapter 2. Identifying and Assessing the Bush Fire Risk

2.1 Process

The Australia/New Zealand Standard AS/NZS 4360: 2004 Risk Management was used as the basis for the risk assessment process. See Figure 2.1 for the steps involved. For a detailed description of the process undertaken, see the *Bush Fire Risk Management Planning Guidelines for Bush Fire Management Committees* on the RFS website: www.rfs.nsw.gov.au.

Figure 2.1 Overview of the risk assessment process

2.2 Communication and Consultation

Community participation is an integral part of risk management. The Community Participation Strategy involves developing and implementing a process to address the needs, issues and concerns of stakeholders within the BFMC area in regards to the BFRMP. See Appendix 1 for the Community Participation Strategy used by the Blue Mountains BFMC in preparing this BFRMP.

2.3 Identifying the Bush Fire Risk

Identifying the level of bush fire risk firstly involved identifying important community assets considered to be at risk from bush fire in the Blue Mountains BFMC area, and then assessing the likelihood and consequence ratings.

2.3.1 Assets

BFMC members and the community, including RFS volunteers, identified assets within the Blue Mountains BFMC area that they believed was at risk of bush fire. The assets are divided into four asset types:

Human settlement

- Residential areas including urban bushland interface areas and rural properties;
- Special Fire Protection areas including schools, hospitals, nursing homes, and tourist facilities; and
- Other human settlement areas including commercial and industrial areas where distinct from major towns.
- Neighbourhood Safer Place (NSP) is defined by the Rural Fires Act 1997 as land or a building designated as a neighbourhood safer place under section 62C. NSPs provide a place of last resort for people during a bush fire. All designated NSP locations for Blue Mountains LGA are available at <http://www.rfs.nsw.gov.au/plan-and-prepare/neighbourhood-safer-places/blue-mountains-lga>.

Economic

- Agricultural: e.g. major silos, cropping/grazing land;
- Commercial /industrial: e.g: major industries, waste treatment plants, sawmills;
- Infrastructure: e.g. large power lines, gas and oil pipelines, railway lines, electricity substations, communication facilities;
- Tourist and recreational: e.g. tourist sites and facilities, resorts, retreats;
- Mines;
- Commercial forests: e.g. Pine plantations, eucalypt plantations and commercial native forests; and
- Drinking water catchments.

Environmental

- Threatened species, populations and ecological communities; and
- Locally important species and ecological communities, such as species and ecological communities especially sensitive to fire.

Cultural

- Aboriginal significance – Aboriginal Places and items of significance;
- Non-indigenous heritage – places and items arising from the early occupation of NSW by European or other non-indigenous settlers; and
- Other cultural assets – libraries, community halls, clubs and recreational facilities.

See Appendix 3 for the full list of assets identified in the Blue Mountains BFMC area. See Appendix 5 Maps 1-10 for the location of assets to be treated under this BFRMP.

2.3.2 Assessing the Bush Fire Risk - Consequence

Once the assets were identified, the consequence of a bush fire impacting on these assets was assessed.

See Appendix 3 for the consequence ratings assigned to each asset identified in the Blue Mountains BFMC area.

The different asset types had different assessment processes used to determine the consequence. These processes are identified below.

Human settlement

A potential fire behaviour model using vegetation type, slope and separation distance was used to produce a threat rating for human settlement assets. The vulnerability of the asset to a bush fire was also assessed and a rating assigned. These ratings were then used to assess the consequence of a bush fire impacting upon a human settlement asset.

Special Fire Protection (SFP) assets were considered inherently more vulnerable to bush fire due to mobility capacity, knowledge or other issues relating to their inhabitants, (e.g. the elderly, infirmed, children or tourists) and therefore stricter requirements for vulnerability assessment and rating were applied.

Due to circumstances surrounding NSPs and their use during a bush fire, stricter requirements for vulnerability assessment and rating will also apply to these assets.

Economic

The level of economic impact e.g. local, regional or state, as well as the economic recovery costs (how long and complicated a financial recovery will be) of the asset were identified. These ratings were used to assess the consequence of a bush fire impacting upon an economic asset.

Environmental

Environmental assets with known minimum fire threshold were assessed to determine if they were at risk of a bush fire within the 5-year life of the BFRMP using fire history data. Those environmental assets, which were within or above the fire threshold, were not assessed in the BFRMP, as the negative impact of a fire within the 5-year period was determined as being low and may even be of benefit to the asset and surrounding habitat (see also Section 3.4 Fire Thresholds).

The vulnerability of an environmental asset was determined by its conservation status and its geographic extent (distribution across the landscape). Vulnerability and potential impact of bush fire were used to assess the consequence of a bush fire impacting upon an environmental asset.

Cultural

For non-indigenous historical, Aboriginal and other cultural assets a potential fire behaviour model using fuel load, slope and proximity was used to produce a threat rating. The physical vulnerability of the asset to a bush fire was also assessed. These ratings were then used to assess the consequence of a bush fire impacting upon a cultural asset.

2.3.3 Assessing the Bush Fire Risk - Likelihood

For all asset types the likelihood of a bush fire occurring was assessed. This involves considering fire history, including ignition cause and patterns, known fire paths, access, containment potential and potential fire run (size of the vegetated area).

See Appendix 3 for the likelihood ratings assigned to each asset identified in the Blue Mountains BFMC area.

2.3.4 Identifying the level of risk

The consequence and likelihood ratings were then used to identify the level of risk. See Appendix 3 for the risk ratings assigned to each asset identified in the Blue Mountains BFMC area.

2.3.5 Evaluating the Bush Fire Risk

Once the risk ratings for each asset were identified, they were evaluated to:

- a) Confirm that risk levels identified in the risk analysis process are appropriate and reflect the relative seriousness of the bush fire risk;
- b) Identify which assets require treatments; and
- c) Identify treatment priorities.

2.3.6 Prioritising Treatments

No organisation has limitless resources to deal with adverse risk. It is therefore necessary to define priorities. The bush fire risk ratings determined were used to prioritise the risk treatments, i.e. areas of extreme risk were considered first for treatment, then very high, cascading down to low. It was also necessary to prioritise within the risk levels i.e. determining which of the high risks was the most serious. This was done on the basis of the consequence and likelihood ratings.

2.3.7 Risk Acceptability

Risks below a certain level were assessed as not requiring treatment within the life of this Plan. This is due to a combination of the number of extreme and very high risk priorities and the capacity to undertake the works. Within the Blue Mountains BFMC area, the level of acceptability is high. Areas of high, medium or low risk are likely to be managed by routine procedures and so do not require a specific application of resources.

There is one exception to this:

1. The area of Megalong Reserve was rated as 'high' risk. Specific treatment for this area has been included in the Plan as the BFMC was already committed to such works to minimise the risk of ignition and fire escaping up the escarpment.

All NSPs for a BFMC area will require ongoing treatment by the applicable landowner to ensure that the asset remains viable as a place of last resort for people during a bush fire. Therefore, all NSP assets are allocated specific treatments in this Plan, regardless of the level of bush fire risk identified and the risk acceptability nominated by the Blue Mountains BFMC.

Chapter 3. Treating the Risk

3.1 Bush Fire Management Zones

Bush Fire Management Zones were identified within the Blue Mountains BFMC area and mapped (see Appendix 5 Maps 1-10). These zones identify the fire management intent for a specific area. See Table 3.1 for descriptions of the zones and their purposes. The four categories of Bush Fire Management Zones are:

- Asset Protection Zone (APZ);
- Strategic Fire Advantage Zone (SFAZ);
- Land Management Zone (LMZ); and
- Fire Exclusion Zone (FEZ).

Appendix 5 Maps 1-10 identify Strategic Fire Advantage Zones that are considered priority for treatment over the next 5 years. A total of 76,058ha has been identified within the BFRMP as Strategic Fire Advantage Zone representing 53% of the BFMC area.

Fire Exclusion Zones have also been identified in the BFMC area as rainforest vegetation communities, which comprise 1.4% land area. These fire sensitive communities are largely confined to moderate to high soil fertility sites on protected lower slopes and creek lines of deep sandstone valleys (see Appendix 6 Maps 1-10). Escarpments, gorges, and moist conditions have played a role in isolating these unique communities from bush fires.

BFMC agency specific bush fire management plans include strategies for ongoing fuel management practices surrounding these sensitive vegetation types. BFMC inter-agency procedures also exist aimed at early bush fire detection and suppression using existing fire trail networks, fire towers, and ground / aerial surveillance on high to catastrophic fire danger days to limit as far as is practical bush fire impact on FEZs.

Due to its geography and vegetation, the Blue Mountain's susceptibility to bush fire risk is extensive and therefore requires a longer-term plan for managing fuels across this landscape. The Blue Mountains BFMC will continue to plan for strategic hazard reduction treatments over a longer timeframe and these have been identified in this Plan.

Zone	Purpose	Suppression Objective(s)	Zone characteristics
Asset Protection Zone	To protect human life, property and highly valued public assets.	To enable the safe use of Direct Attack suppression strategies within the zone. To minimise bush fire impacts on undefended assets.	As per RFS document Standards for Asset Protection Zones.
Strategic Fire Advantage Zone	To provide strategic areas of fire protection advantage which will reduce the speed and intensity of bush fires, and reduce the potential for spot fire development; To aid containment of wildfires to existing management boundaries.	To improve the likelihood and safe use of: Parallel Attack suppression strategies within the zone. and/or Indirect Attack suppression strategies in high to very high fire weather conditions within the zone. To reduce the likelihood of: Crown fire development within the zone; and/or Spot fire ignition potential from the zone.	Zone width related to suppression objectives and dependent upon: <ul style="list-style-type: none"> • Topography • Aspect • Spotting propensity • Location of adjacent firebreaks • Mosaic pattern of treatment Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this Plan. Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFAZ has an OFH of less than high.
Land Management Zone	To meet relevant land management objectives in areas where APZs or SFAZs are not appropriate.	As per the land management and fire protection objectives of the responsible land management agency. To reduce the likelihood of spread of fires. To undertake mosaic burning	As appropriate to achieve land management e.g. heritage and/or fire protection e.g. broad scale mosaic burning objectives.
Fire Exclusion Zone	To exclude bush fires under prescribed fire conditions.	N/A	Variable dependant on size of fire sensitive area requiring protection.

Table 3.1 Bush Fire Management Zones: Purpose, objectives and characteristics

NB: OFH refers the Overall Fuel Hazard Guide as described in the document published by Dept. of Sustainability and Environment (3rd ed. 1999 & NPWS version); State-wide procedures for assessment of fuel hazard will be developed in conjunction with the BFCC.

Note: All areas that are not mapped or described as APZs, SFAZs or FEZs are considered as LMZs.

3.2 BFMC Wide Treatments

BFMC wide treatments are activities which reduce the overall bush fire risk within the BFMC area and are undertaken on an ongoing basis as part of normal business. These treatments are not linked to specific assets in the BFRMP, rather they are applied across all or part of the BFMC area as designated by legislation or agency policy. BFMC wide treatments include the following:

- **Reviewing the bush fire prone land map**

These maps identify bush fire prone land and are used to trigger whether a development application is assessed using Planning for Bush Fire Protection¹.

- **Ensuring developments in bush fire prone land comply with Planning for Bush Fire Protection**

This assessment process requires new applications for development to include bush fire protection measures.

- **Using the Local Environment Plan/s (LEPs) to control developments in areas with a bush fire risk**

LEPs can be used to exclude development in extreme bush fire risk areas or where bush fire protection measures cannot be incorporated.

- **Varying the standard bush fire danger period as required**

In years where the weather is particularly adverse the bush fire danger period may be brought in early or extended. This is assessed every year by the BFMC.

- **Requiring permits during the bush fire danger period**

In the bush fire danger period a fire safety permit is required to light a fire in the open. Permits specify conditions such as fire fighting equipment that must be on site, or restrict burns based on weather conditions.

- **Prosecution of offenders in relation to deliberate ignitions**

Under the *Rural Fires Act 1997*, persons may be prosecuted for breaching the conditions on a fire permit, lighting a fire during a Total Fire Ban, allowing fire to escape their property, or other breaches of the Act. In addition, the member agencies of the BFMC will co-operate with the NSW Police in relation to the prosecution of arsonists under the Crimes Act 1900.

- **Investigation of bush fire cause**

All bush fires, which do not have a known cause, are investigated to identify how they started.

- **Normal fire suppression activities**

Responding to bush fire is a normal business activity for the fire fighting authorities.

¹ NSW Rural Fire Service 2006 Planning for Bush Fire Protection: A guide for councils, planners, fire

authorities and developers.

- **Assessing and managing compliance with strategic fire fighting resource allocation provisions**

Strategic fire fighting resource allocation provisions is the process used to identify the number of stations, brigades and appliances required in an area, and considers members, training, assets and hazards.

- **Preparation of a S52 Operations Coordination Plan**

The Operations Coordination Plan is prepared biannually and sets out how coordinated fire fighting will occur. It includes specific operational restrictions on fire fighting techniques in certain areas, where fires will be managed from, and how agencies involved can communicate during operations.

- **Fire Management Plans or Plans of Management**

Some land management agencies have developed fire management plans or plans of management with specific fire or fuel management strategies, for example a Blue Mountains National Park Reserve Fire Management Strategy. These publicly exhibited plans form the basis for operational fire planning on National Park Reserves.

- **Bush Fire Hazard Complaints**

If someone is concerned about possible bush fire hazards on a neighbouring property or any other land, then this can be reported to the RFS Commissioner or their local RFS Fire Control Centre. The complaint will be investigated and may result in a notice being issued to the landowner or manager to reduce the hazard.

- **Appointing Environmental Experts to Incident Management Teams (IMTs)**

Appropriately qualified persons, able to assess and advise on threatened species, are to be made available to IMTs during Class 3 incidents.

3.3 Asset Specific Treatments

There are six broad strategy groups available to treat the bush fire risk to assets identified in the BFRMP.

The types of asset specific treatments in each strategy group used in the Blue Mountains BFMC area are listed below. A full list of the treatment strategies in the Blue Mountains BFMC area are in Appendix 4.

The Blue Mountains BFMC, within the life of this Plan, is also to investigate options for the location of a Southern Strategic Corridor (SSC) as an additional strategy and treatment to protect southern townships of the Blue Mountains from bush fires (See Appendix 2).

Strategy	Targeted treatments used in the Blue Mountains BFMC
Ignition Management	Manage access to potential ignition sources Patrol reserve on extreme/catastrophic fire days
Hazard Reduction	Inspect/maintain APZs as required Conduct mosaic pattern fuel management in LMZ/SFAZ Inspect/maintain powerline easements Inspect/maintain railway corridor
Community Education	Implement community engagement strategy or plan.
Preparedness	Inspect/maintain/construct fire trail as required
Property Planning	Conduct Community Protection Planning.
Other	Implement Northern Strategic Line* Maintain NSP's in accordance with RFS Guidelines.

Table 3.2 Asset specific treatments used in the Blue Mountains BFMC area

*An identified strategic control line consisting of fire trails, tracks, and hand tool lines used in bush fire suppression, mitigation and prevention activities to protect human settlements located from Mount Victoria to Hawkesbury Heights that directly adjoin the Grose Valley Catchment Area (see maps in Appendix 5).

3.4 Fire Thresholds

The vegetation in the Blue Mountains BFMC area was classified into fire threshold categories (Table 3.3).

Vegetation formation	Minimum SFAZ Threshold	Minimum LMZ Threshold	Maximum Threshold	Notes
Rainforest	NA	NA	NA	Fire should be avoided.
Wet Sclerophyll forest (shrubby subformation)	25	30	60	Crown fires should be avoided in the lower end of the interval range.
Wet Sclerophyll forest (grassy subformation)	10	15	50	Crown fires should be avoided in the lower end of the interval range.
Grassy woodland	5	8	40	Minimum interval of 10 years should apply in the Southern Tablelands area. Occasional intervals greater than 15 years may be desirable.
Grassland	2	3	10	Occasional intervals greater than 7 years should be included in coastal areas. There was insufficient data to give a maximum interval; available evidence indicates maximum intervals should be approximately 10 years.
Dry sclerophyll forest (shrub/grass subformation)	5	8	50	Occasional intervals greater than 25 years may be desirable.
Dry sclerophyll forest (shrub subformation)	7	10	30	Occasional intervals greater than 25 years may be desirable.
Heathlands	7	10	30	Occasional intervals greater than 20 years may be desirable.
Freshwater wetlands	6	10	35	Occasional intervals greater than 30 years may be desirable.
Forested wetlands	7	10	35	Some intervals greater than 20 years may be desirable.

Table 3.3 Times between Fire Thresholds for Vegetation Categories in Years

3.5 Annual Works Programs

The land management agencies and fire fighting authorities responsible for implementing the treatments identified in this Plan will include those treatments in their annual works programs detailing how, when, and where the required activities will be undertaken.

3.6 Implementation

When the treatments identified in this BFRMP are implemented, there are a number of issues that need to be considered by the responsible agency including environmental assessments and approvals, smoke management and prescribed burn plans. Smoke management as far as practical aims at reduce smoke impact on residential areas, industrial/commercial areas, special fire protection areas (such as schools and nursing homes), tourist sites and major road/rail corridors located across the Blue Mountains BFMC area.

Chapter 4. Performance Monitoring and Reviewing

4.1 Review

This BFRMP must be reviewed and updated within each successive five-year period from the constitution of the BFMC, or more often as identified by the BFMC. The Blue Mountains BFMC will also review this Plan as necessary to account for any changes in context or risk. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; and/ or
- following a major fire event.

4.2 Monitoring

The BFMC is required to monitor progress towards the completion of treatment works listed in the BFRMP, and the timeliness of the works.

4.3 Reporting

The BFMC is required to report annually to the BFCC on its progress in implementing the bush fire risk management activities identified in this Plan.

4.4 Performance Measurements

State wide performance measurements, which are linked to the BFRMP, have been identified by the BFCC. All BFMCs must use these to monitor and report on their success in reducing the bush fire risk in their BFMC area.

Appendices

Appendix 1 Community Participation Strategy

Appendix 3 Asset Register

Appendix 4 Treatment Register

Appendix 5 Maps 1-10

Appendix 1 Community Participation Strategy

Effective communication requires time, discussion and exchange of information rather than a one-way flow of information from the BFMC to other stakeholders. Communication and community participation must be undertaken throughout the BFRMP process.

This strategy is based on Section 2 of Annex B of the Bush Fire Coordinating Committee (BFCC) Policy No 1/2008 *Bush Fire Risk Management*. In preparing this strategy the Communication and Consultation Working Group has also considered Blue Mountains City Council's Community Consultation Policy and Department of Urban Affairs and Planning Ideas for Community Consultation.

1. The Community Participation Strategy

The Community Participation Strategy (CPS) involves a process to address the needs, issues and concerns of stakeholders within the BFMC area in regards to bush fire.

The purpose of this CPS is to:

- ensure that specific and targeted communication occurs between the BFMC and our community and other stakeholders throughout the development of our BFRMP;
- ensure prominent stakeholders do not make judgements on the acceptability of a risk based on their own perception;
- provide greater opportunity for local brigades, land holders and other stakeholders to have input into the bush fire risk management process;
- ensure that the community's concerns and perceptions of bush fire risk are identified, understood, documented and addressed;
- improve community confidence in bush fire risk management across the landscape and provide the community with a sense of ownership of the BFRMP; and
- educate the community regarding bush fire risk management in the area and their responsibilities, so that they can contribute towards risk reduction.

The CPS is an essential part of our BFRMP process. Communication and consultation with our community is an essential tool in ensuring the success of the BFRMP. The support of our community for the BFRMP is important.

The community will not only participate during the preparation of the BFRMP, they will also be involved during the implementation phase and any subsequent reviews.

1.1 Who developed this community participation strategy?

This CPS has been developed by the Bush Fire Risk Management Plan (BFRMP) Working Group.

2. Our target audience

This strategy aims to ensure that all persons within the community have equal opportunity to provide input into the development and implementation of the BFRMP, utilising both formal and informal networks, organisations and individuals.

Our audiences are broadly defined as follows:

Geographic Audiences – Areas defined in accord with the Map Display Areas determined by the BFMC.

Area 1	Area 2	Area 3	Area 4	Area 5	Area 6
East of Linden	Linden to Katoomba	Medlow Bath to Mt Victoria Including Shipley	Bell to Mt Tomah	Megalong Valley South to Breakfast Creek	Grose Valley and South (BMNP south of Highway)

Areas of Interest Audiences – Areas defined by background or special focus.

- Land Management
- Infrastructure
- Commercial Services
- Emergency Services
- Tourism Operators

Special Audiences – Where an audience might overlap between Geography and Areas of Interest, or other criteria. Some examples might be:

- Agency Networks
- Community Networks
- BFMC Committees
- Neighbouring Areas

3. Our issues to be communicated

There are essentially five main areas that need to be considered when determining what issues need to be communicated. They are:

1. Consider the community context and criteria for identifying bush fire risk in the area;
2. Consider limitations and modifications to existing data on local fire history, fire behaviour and impacts;
3. Involving the community in the identification of valuable community assets;

4. Raising the awareness of, and getting the community involved in, risk analysis and evaluation by getting the community to discuss and consider areas they think are a bush fire hazard. This could include discussions about the likelihood ratings for the area and assets that have been identified as well as the methods used to determine consequence ratings; and
5. Raising the awareness of and getting the community involved in applying risk treatment strategies and prioritisation by getting the community to discuss and consider treatment options and prioritisation for identified risks.

4. Communication methods

Communication is a two-way flow of information. At all stages of the BFRMP process submissions from all of our audiences are encouraged. Each submission will be acknowledged and considered by the relevant BFRMP Working Group.

Submissions should be marked "BFRMP Submission" and forwarded to:

The Executive Officer
Blue Mountains Bush Fire Management Committee
C/- PO Box 600
Katoomba NSW 2780

Written submissions received between the 1/7/2014 until the 30/9/2014 will be considered. We will be utilising the following communication methods in the review of the currently approved Blue Mountains BFMC BFRMP for ALL Audience types:

- Internet (Blue Mountains RFS Website & RFS Facebook),
- Public Exhibition Displays
- Word of mouth
- Email
- Newspaper Print Media (Gazette)
- Telephone
- BFMC/LEMC distribution.

5. How much consultation will be undertaken in the review of the current Plan?

The consultation process during the review of the current Plan will involve the following:

Consultation Type	Location	Date	Time
Static Public Display	Blackheath (NPWS Office)	1/7/2014 to 30/9/2014	During office hours
Static Public Display	Katoomba (RFS FCC)	1/7/2014 to 30/9/2014	During office hours
Static Public Display	Katoomba (Council Chambers)	1/7/2014 to 30/9/2014	During office hours
Static Public Display	Lawson (Public Library)	1/7/2014 to 30/9/2014	During office hours
Static Public Display	Springwood (Public Library)	1/7/2014 to 30/9/2014	During office hours
Static Public Display	Blaxland (Public Library)	1/7/2014 to 30/9/2014	During office hours
Blue Mountains Gazette Heat Beat Article	Blue Mountains wide distribution	25/6/2014	NA
Blue Mountains Gazette Public Notices	Blue Mountains wide distribution	25/6/2014	NA
BFMC Working Group Sessions	*Blue Mountains Fire Control (monthly)	May 2013 –Oct 2014	1000-1230hrs
BFMC Meeting Presentations & Information distribution.	*Blue Mountains Fire Control (quarterly)	April 2013- November 2014	1000-1230hrs

It is anticipated that the Draft BFRMP will be released for public exhibition on 1/7/2014.

Appendix 2 Review of the Southern Strategic Corridor (SSC)

The Blue Mountains Bush Fire Management Committee (BFMC) within the next 5 year review period of this BFRMP is to revisit the previously known Southern Strategic Line (SSL) project first conducted in 1999 (now known as the Southern Strategic Corridor (SSC)) with the aim of finalising a viable set of options to assist in the protection of the southern townships of the Blue Mountains from bush fire attack.

This project will involve revisiting the initial geographical area extending from Narrow Neck Plateau to the Nepean River and look at alternative options of either relocating and/or extending the SSC in conjunction with previous historical data captured relating to bush fire behaviour potential to evaluate the likely containment options.

The Blue Mountains BFMC currently has in place a Northern Strategic Line strategy detailed with various viable control line options for the northern townships as treatments in this Plan and it is envisaged to obtain a similar strategy for the SSC. However, this concept is somewhat more limited in its effectiveness given much of the previous SSL proposal has been linked to walking tracks together with cliff lines, rainforest, and major creek lines which have shown to be very ineffective to contain fires occurring on extreme and catastrophic fire danger days.

Some strategies that will need to be considered in the SSC review would include:

*Establishing **asset protection zones** around all buildings located on the perimeter of the bushland/urban interface.

*Establishing **interface control lines** as part of, or in conjunction with Asset Protection Zones around buildings.

*Establishing **strategic fire advantage zones** between the interface control line and an outer control line.

*Establishing in key locations **ancillary control lines** between the interface control line and the outer control line.

*Establish an **outer control line** at the outer perimeter of the strategic fire advantage zone and/or establish an outer control line potentially to control low to moderate intensity wildfire.

Appendix 3 Asset Register

Appendix 5 Maps

Blue Mountains BFMC Bush Fire Risk Management Plan 2016

The Mounts - Map Display Area Map 1 of 9

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Blue Mountains Bush Fire Management Committee (BFMC) pursuant to section 52 of the *Rural Fires Act 1997*.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

- The objectives of this BFRMP are to:
- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
 - manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
 - reduce the community's vulnerability to bush fires by improving its preparedness; and
 - effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Blue Mountains BFMC, covering the local government area(s) of Blue Mountains. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

Review
Under the *Rural Fires Act 1997* this plan must be reviewed and updated within each successive five year period following the constitution of the BFMC. The Blue Mountains BFMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

Assets
This BFRMP identifies the assets that are considered by the Blue Mountains BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFMC area identified as requiring treatments are listed in the assets table. Other assets within the BFMC area that were assessed as not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number "NA" denotes non-spatial assets.

Treatments
Specific treatments assigned to assets in the Blue Mountains area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFMC wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFMC area are:

- reviewing the bush fire prone land map;
- ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
- using the Local Environment Plans (LEPs) to control development in areas with a bush fire risk;
- varying the standard bush fire danger period as required;
- requiring permits during bush fire danger periods
- prosecution of arsonists/offenders
- investigation of bush fire cause;
- normal fire suppression activities;
- assessing and managing compliance with strategic fire-fighting resource allocation management systems;
- preparation of a S2 Operations Coordination Plan;
- fire management plans or plans of management; and
- bush fire hazard complaints.

Note on LMZ. All areas not specifically mapped as an APZ, SFAZ or FEZ are considered as LMZ for this risk management plan. For areas identified by an LMZ polygon on the map, please refer to the BFRMP document for the specific land management objectives.

Zone	Purpose	Suppression Objective(s)	Zone characteristics
Asset Protection Zone	To protect human life, property and highly valued public assets and values.	To enable the safe use of Direct Attack suppression strategies within the zone. To minimise bush fire impacts on undeveloped assets.	As per RFS document, Standards for Asset Protection Zones.
Strategic Fire Advantage Zone	To provide strategic areas of fire protection advantage which will reduce the spread and intensity of bush fires, and reduce the potential for spot fire development. To aid containment of wildfires to existing management boundaries.	To improve the likelihood and safe use of: Parallel Attack suppression strategies within the zone. Indirect Attack (back burning) in high to very high fire weather conditions within the zone. To reduce the likelihood of: Crown fire development within the zone, and/or Spot fire ignition potential from the zone.	Zone width related to suppression objectives and dependent upon: - Topography - Aspect - Spotting propensity - Location of adjacent firebreaks - Mosaic pattern of treatment Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this plan. Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFAZ has an OFH of less than high.
Land Management Zone	To meet relevant land management objectives in areas where APZs or SFAZs are not appropriate.	To reduce the likelihood of spread of fires. To undertake mosaic burning	As appropriate to achieve land management e.g. heritage and/or fire protection e.g. broad scale mosaic burning objectives.
Fire Exclusion Zone	To exclude bush fires.	N/A	Variable dependent on size of fire sensitive area requiring protection.

Blue Mountains BFMC Bush Fire Risk Management Plan 2016

Blackheath - Map Display Area Map 2 of 9

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Blue Mountains Bush Fire Management Committee (BFMC) pursuant to section 52 of the Rural Fires Act 1997.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

- The objectives of this BFRMP are to:
- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
 - manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
 - reduce the community's vulnerability to bush fires by improving its preparedness; and
 - effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Blue Mountains BFMC, covering the local government area(s) of Blue Mountains. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

Review
Under the Rural Fires Act 1997 this plan must be reviewed and updated within each successive five year period following the constitution of the BFMC. The Blue Mountains BFMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

Assets
This BFRMP identifies the assets that are considered by the Blue Mountains BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFMC area identified as requiring treatments are listed in the assets table. Other assets within the BFMC area that were assessed as not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number "NA" denotes non-spatial assets.

- Treatments**
Specific treatments assigned to assets in the Blue Mountains area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFMC wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFMC area are:
- reviewing the bush fire prone land map;
 - ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
 - using the Local Environment Plans (LEPs) to control development in areas with a bush fire risk;
 - varying the standard bush fire danger period as required;
 - requiring permits during bush fire danger periods
 - prosecution of arsonists/offenders
 - investigation of bush fire cause;
 - normal fire suppression activities;
 - assessing and managing compliance with strategic fire-fighting resource allocation management systems;
 - preparation of a S2 Operations Coordination Plan;
 - fire management plans or plans of management; and
 - bush fire hazard complaints.

Note on LMAZ. All areas not specifically mapped as an APZ, SFAZ or FEZ are considered as LMAZ for this risk management plan. For areas identified by an LMAZ polygon on the map, please refer to the BFRMP document for the specific land management objectives.

Zone	Purpose	Suppression Objective(s)	Zone characteristics
Asset Protection Zone	To protect human life, property and highly valued public assets and values.	To enable the safe use of Direct Attack suppression strategies within the zone. To minimise bush fire impacts on undefended assets.	As per RFS document, Standards for Asset Protection Zones.
Strategic Fire Advantage Zone	To provide strategic areas of fire protection advantage which will reduce the spread and intensity of bush fires, and reduce the potential for spot fire development. To aid containment of wildfires to existing management boundaries.	To improve the likelihood and safe use of Parallel Attack suppression strategies within the zone. Indirect Attack (back burning) in high to very high fire weather conditions within the zone. Blue Mountains BFMC Bush Fire Risk Management Plan 2016

Grose Valley - Map Display Area Map 3 of 9

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Blue Mountains Bush Fire Management Committee (BFMC) pursuant to section 52 of the *Rural Fires Act 1997*.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

- The objectives of this BFRMP are to:
- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
 - manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
 - reduce the community's vulnerability to bush fires by improving its preparedness; and
 - effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Blue Mountains BFMC, covering the local government area(s) of Blue Mountains. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

Review
Under the *Rural Fires Act 1997* this plan must be reviewed and updated within each successive five year period following the constitution of the BFMC. The Blue Mountains BFMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

Assets
This BFRMP identifies the assets that are considered by the Blue Mountains BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFMC area identified as requiring treatments are listed in the assets table. Other assets within the BFMC area that were assessed as not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number "NA" denotes non-spatial assets.

Treatments
Specific treatments assigned to assets in the Blue Mountains area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFMC wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFMC area are:

- reviewing the bush fire prone land map;
- ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
- using the Local Environment Plans (LEPs) to control development in areas with a bush fire risk;
- varying the standard bush fire danger period as required;
- requiring permits during bush fire danger periods
- prosecution of arsonists/offenders
- investigation of bush fire causes;
- normal fire suppression activities;
- assessing and managing compliance with strategic fire-fighting resource allocation management systems;
- preparation of a S2 Operations Coordination Plan;
- fire management plans or plans of management; and
- bush fire hazard complaints.

Note on LMZ. All areas not specifically mapped as an APZ, SFAZ or FEZ are considered as LMZ for this risk management plan. For areas identified by an LMZ polygon on the map, please refer to the BFRMP document for the specific land management objectives.

Zone	Purpose	Suppression Objective(s)	Zone characteristics
Asset Protection Zone	To protect human life, property and highly valued public assets and values.	To enable the safe use of Direct Attack suppression strategies within the zone. To minimise bush fire impacts on undervalued assets.	As per RFS document, Standards for Asset Protection Zones.
Strategic Fire Advantage Zone	To provide strategic areas of fire protection advantage which will reduce the spread and intensity of bush fires, and reduce the potential for spot fire development. To aid containment of wildfires to existing management boundaries.	To improve the likelihood and safe use of: Parallel Attack suppression strategies within the zone. and/or Indirect Attack (back burning) in high to very high fire weather conditions within the zone. To reduce the likelihood of: Crown fire development within the zone, and/or Spot fire ignition potential from the zone.	Zone width related to suppression objectives and dependent upon: - Topography - Slope - Spotting propensity - Location of adjacent firebreaks - Mosaic pattern of treatment - Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this plan. Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFAZ has an OFH of less than high.
Land Management Zone	To meet relevant land management objectives in areas where SFAZ or SFAZs are not appropriate.	To reduce the likelihood of spread of fires. To undertake mosaic burning	As appropriate to achieve land management e.g. heritage and/or fire protection e.g. broad scale mosaic burning objectives.
Fire Exclusion Zone	To exclude bush fires.	N/A	Variable dependent on size of fire sensitive area requiring protection.

Blue Mountains BFMC Bush Fire Risk Management Plan 2016

Megalong Valley - Map Display Area Map 4 of 9

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Blue Mountains Bush Fire Management Committee (BFMC) pursuant to section 52 of the *Rural Fires Act 1997*.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

- The objectives of this BFRMP are to:
- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
 - manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
 - reduce the community's vulnerability to bush fires by improving its preparedness; and
 - effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Blue Mountains BFMC, covering the local government area(s) of Blue Mountains. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

Review
Under the *Rural Fires Act 1997* this plan must be reviewed and updated within each successive five year period following the constitution of the BFMC. The Blue Mountains BFMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

Assets
This BFRMP identifies the assets that are considered by the Blue Mountains BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFMC area identified as requiring treatments are listed in the assets table. Other assets within the BFMC area that were assessed as not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number "NA" denotes non-spatial assets.

Treatments
Specific treatments assigned to assets in the Blue Mountains area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFMC wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFMC area are:

- reviewing the bush fire prone land map;
- ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
- using the Local Environment Plans (LEPs) to control development in areas with a bush fire risk;
- varying the standard bush fire danger period as required;
- requiring permits during bush fire danger periods;
- prosecution of arsonists/offenders;
- investigation of bush fire cause;
- normal fire suppression activities;
- assessing and managing compliance with strategic fire-fighting resource allocation management systems;
- preparation of a S2 Operations Coordination Plan;
- fire management plans or plans of management; and
- bush fire hazard complaints.

Note on LMAZ. All areas not specifically mapped as an APZ, SFAZ or FEZ are considered as LMAZ for this risk management plan. For areas identified by an LMAZ polygon on the map, please refer to the BFRMP document for the specific land management objectives.

Zone	Purpose	Suppression Objective(s)	Zone characteristics
Asset Protection Zone	To protect human life, property and highly valued public assets and values.	To enable the safe use of Direct Attack suppression strategies within the zone. To minimise bush fire impacts on undervalued assets.	As per RFS document: Standards for Asset Protection Zones.
Strategic Fire Advantage Zone	To provide strategic areas of fire protection advantage which will reduce the spread and intensity of bush fires, and reduce the potential for spot fire development. To aid containment of wildfires to existing management boundaries.	To improve the likelihood and safe use of: Parallel Attack suppression strategies within the zone. and/or Indirect Attack (back burning) in high to very high fire weather conditions within the zone. To reduce the likelihood of: Crown fire development within the zone, and/or Spot fire ignition potential from the zone.	Zone width related to suppression objectives and dependent upon: - Topography - Location of adjacent firebreaks - Spotting propensity - Mosaic pattern of treatment - Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this plan. Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFAZ has an OFH of less than high.
Land Management Zone	To meet relevant land management objectives in areas where APZs or SFAZs are not appropriate.	As per the land management and fire protection objectives of the responsible land management agency. To reduce the likelihood of spread of fires. To undertake mosaic burning	As appropriate to achieve land management e.g. heritage and/or fire protection e.g. broad scale mosaic burning objectives.
Fire Exclusion Zone	To exclude bush fires.	N/A	Variable dependent on size of fire sensitive area requiring protection.

Blue Mountains BFMC Bush Fire Risk Management Plan 2016

Katoomba - Map Display Area Map 5 of 9

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Blue Mountains Bush Fire Management Committee (BFMC) pursuant to section 52 of the *Rural Fires Act 1997*.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

The objectives of this BFRMP are to:

- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
- manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
- reduce the community's vulnerability to bush fires by improving its preparedness; and
- effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Blue Mountains BFMC, covering the local government area(s) of Blue Mountains. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

Review
Under the *Rural Fires Act 1997* this plan must be reviewed and updated within each successive five year period following the constitution of the BFMC. The Blue Mountains BFMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

Assets
This BFRMP identifies the assets that are considered by the Blue Mountains BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFMC area identified as requiring treatments are listed in the assets table. Other assets within the BFMC area that were assessed as not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number "NA" denotes non-spatial assets.

Treatments
Specific treatments assigned to assets in the Blue Mountains area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFMC wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFMC area are:

- reviewing the bush fire prone land map;
- ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
- using the Local Environment Plans (LEPs) to control development in areas with a bush fire risk;
- requiring permits during bush fire danger periods;
- production of atomisation/diffusers;
- investigation of bush fire cause;
- normal fire suppression activities;
- assessing and managing compliance with strategic fire-fighting resource allocation management systems;
- preparation of a S2 Operations Coordination Plan;
- fire management plans or plans of management; and
- bush fire hazard complaints.

Note on LMZ. All areas not specifically mapped as an APZ, SFZ or FEZ are considered as LMZ for this risk management plan. For areas identified by an LMZ polygon on the map, please refer to the BFRMP document for the specific land management objectives.

Zone	Purpose	Suppression Objective(s)	Zone characteristics
Asset Protection Zone	To protect human life, property and highly valued public assets and values.	To enable the safe use of Direct Attack suppression strategies within the zone. To minimise bush fire impacts on undeveloped assets.	As per RFS document, Standards for Asset Protection Zones.
Strategic Fire Advantage Zone	To provide strategic areas of fire protection advantage which will reduce the spread and intensity of bush fires, and reduce the potential for spot fire development. To aid containment of wildfires to existing management boundaries.	To improve the likelihood and safe use of Parallel Attack suppression strategies within the zone, and/or Indirect Attack (back burning) in high to very high fire weather conditions within the zone. To reduce the likelihood of: Green fire development within the zone, and/or Spot fire ignition potential from the zone.	Zone width related to suppression objectives and dependent upon: - Topography - Slope - Spotting propensity - Location of adjacent firebreaks - Mosaic pattern of treatment Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this zone. Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFZ has an OFH of less than high.
Land Management Zone	To meet relevant land management objectives in areas where APZs or SFZs are not appropriate.	As per the land management and fire protection objectives of the responsible land management agency. To reduce the likelihood of spread of fires. To undertake mosaic burning	As appropriate to achieve land management e.g. heritage and/or fire protection e.g. broad scale mosaic burning objectives.
Fire Exclusion Zone	To exclude bush fires.	N/A	Variable dependent on size of fire sensitive area requiring protection.

Blue Mountains BFMC Bush Fire Risk Management Plan 2016

Hazelbrook - Map Display Area Map 6 of 9

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Blue Mountains Bush Fire Management Committee (BFMC) pursuant to section 52 of the *Rural Fires Act 1997*.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

- The objectives of this BFRMP are to:
- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
 - manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
 - reduce the community's vulnerability to bush fires by improving its preparedness; and
 - effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Blue Mountains BFMC, covering the local government area(s) of Blue Mountains. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

Review
Under the *Rural Fires Act 1997* this plan must be reviewed and updated within each successive five year period following the constitution of the BFMC. The Blue Mountains BFMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

Assets
This BFRMP identifies the assets that are considered by the Blue Mountains BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFMC area identified as requiring treatments are listed in the assets table. Other assets within the BFMC area that were assessed as not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number 'NA' denotes non-spatial assets.

Treatments
Specific treatments assigned to assets in the Blue Mountains area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFMC wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFMC area are:

- reviewing the bush fire prone land map;
- ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
- using the Local Environment Plans (LEPs) to control development in areas with a bush fire risk;
- varying the standard bush fire danger period as required;
- requiring permits during bush fire danger periods;
- prosecution of arsonists/offenders;
- investigation of bush fire cause;
- normal fire suppression activities;
- assessing and managing compliance with strategic fire-fighting resource allocation management systems;
- preparation of a S2 Operations Coordination Plan;
- fire management plans or plans of management; and
- bush fire hazard complaints.

Note on LMAZ. All areas not specifically mapped as an APZ, SFAZ or FEZ are considered as LMAZ for this risk management plan. For areas identified by an LMAZ polygon on the map, please refer to the BFRMP document for the specific land management objectives.

Zone	Purpose	Suppression Objective(s)	Zone characteristics
Asset Protection Zone	To protect human life, property and highly valued public assets and values.	To enable the safe use of Direct Attack suppression strategies within the zone. To minimise bush fire impacts on undervalued assets.	As per RFS document, Standards for Asset Protection Zones.
Strategic Fire Advantage Zone	To provide strategic fire protection advantage which will reduce the spread and intensity of bush fires, and reduce the potential for spot fire development. To assist containment of wildfires to existing management boundaries.	To improve the likelihood and safe use of: Parallel Attack suppression strategies within the zone, and/or Indirect Attack (back burning) in high to very high fire weather conditions within the zone. To reduce the likelihood of: Crown fire development within the zone, and/or Spot fire ignition potential from the zone.	Zone width related to suppression objectives and dependent upon: - Topography - Aspect - Spotting propensity - Location of adjacent firebreaks - Mosaic pattern of treatment Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this plan. Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFAZ has an OFH of less than high.
Land Management Zone	To meet relevant land management objectives in areas where SFAZs or APZs are not appropriate.	To reduce the likelihood of spread of fires. To undertake mosaic burning.	As appropriate to achieve land management e.g. heritage and/or fire protection e.g. broad scale mosaic burning objectives.
Fire Exclusion Zone	To exclude bush fires.	N/A	Variable dependent on size of fire sensitive area requiring protection.

Blue Mountains BFMC Bush Fire Risk Management Plan 2016

Springwood - Map Display Area Map 7 of 9

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Blue Mountains Bush Fire Management Committee (BFMC) pursuant to section 52 of the *Rural Fires Act 1997*.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

- The objectives of this BFRMP are to:
- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
 - manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
 - reduce the community's vulnerability to bush fires by improving its preparedness; and
 - effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Blue Mountains BFMC, covering the local government area(s) of Blue Mountains. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

Review
Under the *Rural Fires Act 1997* this plan must be reviewed and updated within each successive five year period following the constitution of the BFMC. The Blue Mountains BFMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

Assets
This BFRMP identifies the assets that are considered by the Blue Mountains BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFMC area identified as requiring treatments are listed in the assets table. Other assets within the BFMC area that were assessed as not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number "NA" denotes non-spatial assets.

Treatments
Specific treatments assigned to assets in the Blue Mountains area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFMC wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFMC area are:

- reviewing the bush fire prone land map;
- ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
- using the Local Environment Plans (LEPs) to control development in areas with a bush fire risk;
- varying the standard bush fire danger period as required;
- requiring permits during bush fire danger periods
- prosecution of arsonists/offenders
- investigation of bush fire cause;
- normal fire suppression activities;
- assessing and managing compliance with strategic fire-fighting resource allocation management systems;
- preparation of a S2 Operations Coordination Plan;
- fire management plans or plans of management; and
- bush fire hazard complaints.

Note on LMZ. All areas not specifically mapped as an APZ, SFAZ or FEZ are considered as LMZ for this risk management plan. For areas identified by an LMZ polygon on the map, please refer to the BFRMP document for the specific land management objectives.

Zone	Purpose	Suppression Objective(s)	Zone characteristics
Asset Protection Zone	To protect human life, property and highly valued public assets and values.	To enable the safe use of Direct Attack suppression strategies within the zone. To minimise bush fire impacts on undeveloped assets.	As per RFS document: Standards for Asset Protection Zones.
Strategic Fire Advantage Zone	To provide strategic areas of fire protection advantage which will reduce the spread and intensity of bush fires, and reduce the potential for spot fire development. To aid containment of wildfires to existing management boundaries.	To improve the likelihood and safe use of: Parallel Attack suppression strategies within the zone, and/or Indirect Attack (back burning) in high to very high fire weather conditions within the zone. To reduce the likelihood of: Crown fire development within the zone, and/or Spot fire ignition potential from the zone.	Zone width related to suppression objectives and dependent upon: - Topography - Slope - Spotting propensity - Location of adjacent firebreaks - Mosaic pattern of treatment - Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this plan. Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFAZ has an OFH of less than high.
Land Management Zone	To meet relevant land management objectives in areas where APZ or SFAZ are not appropriate.	To reduce the likelihood of spread of fires. To undertake mosaic burning	As appropriate to achieve land management e.g. heritage and/or fire protection e.g. broad scale mosaic burning objectives.
Fire Exclusion Zone	To exclude bush fires.	N/A	Variable dependent on size of fire sensitive area requiring protection.

Blue Mountains BFMC Bush Fire Risk Management Plan 2016

Blaxland - Map Display Area Map 8 of 9

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Blue Mountains Bush Fire Management Committee (BFMC) pursuant to section 52 of the Rural Fires Act 1997.

- The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.
- The objectives of this BFRMP are to:
- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
 - manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
 - reduce the community's vulnerability to bush fires by improving its preparedness; and
 - effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Blue Mountains BFMC, covering the local government area(s) of Blue Mountains. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

Review
Under the Rural Fires Act 1997 this plan must be reviewed and updated within each successive five year period following the constitution of the BFMC. The Blue Mountains BFMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

Assets
This BFRMP identifies the assets that are considered by the Blue Mountains BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFMC area identified as requiring treatments are listed in the assets table. Other assets within the BFMC area that were assessed as not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number "NA" denotes non-spatial assets.

- Treatments**
Specific treatments assigned to assets in the Blue Mountains area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFMC wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFMC area are:
- reviewing the bush fire prone land map;
 - ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
 - using the Local Environment Plans (LEPs) to control development in areas with a bush fire risk;
 - varying the standard bush fire danger period as required;
 - requiring permits during bush fire danger periods
 - prosecution of arsonists/offenders
 - investigation of bush fire cause;
 - normal fire suppression activities;
 - assessing and managing compliance with strategic fire-fighting resource allocation management systems;
 - preparation of a S2 Operations Coordination Plan;
 - fire management plans or plans of management; and
 - bush fire hazard complaints.

Note on LMAZ. All areas not specifically mapped as an APZ, SFAZ or FEZ are considered as LMAZ for this risk management plan. For areas identified by an LMAZ polygon on the map, please refer to the BFRMP document for the specific land management objectives.

Zone	Purpose	Suppression Objective(s)	Zone characteristics
Asset Protection Zone	To protect human life, property and highly valued public assets and values.	To enable the safe use of Direct Attack suppression strategies within the zone. To minimise bush fire impacts on undervalued assets.	As per RFS document: Standards for Asset Protection Zones.
Strategic Fire Advantage Zone	To provide strategic areas of fire protection advantage which will reduce the spread and intensity of bush fires, and reduce the potential for spot fire development. To aid containment of wildfires to existing to existing land management boundaries.	To improve the likelihood and safe use of Parallel Attack suppression strategies within the zone. Indirect Attack (back burning) in high to very high fire weather conditions within the zone. To reduce the likelihood of Crown fire development within the zone, and/or Spot fire ignition potential from the zone. Blue Mountains BFMC Bush Fire Risk Management Plan 2016

South - Map Display Area Map 9 of 9

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Blue Mountains Bush Fire Management Committee (BFMC) pursuant to section 52 of the *Rural Fires Act 1997*.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

- The objectives of this BFRMP are to:
- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
 - manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
 - reduce the community's vulnerability to bush fires by improving its preparedness; and
 - effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Blue Mountains BFMC, covering the local government area(s) of Blue Mountains. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

Review
Under the *Rural Fires Act 1997* this plan must be reviewed and updated within each successive five year period following the constitution of the BFMC. The Blue Mountains BFMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

Assets
This BFRMP identifies the assets that are considered by the Blue Mountains BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFMC area identified as requiring treatments are listed in the assets table. Other assets within the BFMC area that were assessed as not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number "NA" denotes non-spatial assets.

- Treatments**
Specific treatments assigned to assets in the Blue Mountains area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFMC wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFMC area are:
- reviewing the bush fire prone land map;
 - ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
 - using the Local Environment Plans (LEPs) to control development in areas with a bush fire risk;
 - varying the standard bush fire danger period as required;
 - requiring permits during bush fire danger periods
 - prosecution of arsonists/offenders
 - investigation of bush fire cause;
 - normal fire suppression activities;
 - assessing and managing compliance with strategic fire-fighting resource allocation management systems;
 - preparation of a S2 Operations Coordination Plan;
 - fire management plans or plans of management; and
 - bush fire hazard complaints.

Note on LMA: All areas not specifically mapped as an APZ, SFZA or FEZ are considered as LMA for this risk management plan. For areas identified by an LMA polygon on the map, please refer to the BFRMP document for the specific land management objectives.

Zone	Purpose	Suppression Objective(s)	Zone characteristics
Asset Protection Zone	To protect human life, property and highly valued public assets and values.	To enable the safe use of Direct Attack suppression strategies within the zone. To minimise bush fire impacts on undervalued assets.	As per RFS document: Standards for Asset Protection Zones.
Strategic Fire Advantage Zone	To provide strategic areas of fire protection advantage which will reduce the spread and intensity of bush fires, and reduce the potential for spot fire development. To aid containment of wildfires to existing management boundaries.	To improve the likelihood and safe use of: Parallel Attack suppression strategies within the zone. and/or Indirect Attack (back burning) in high to very high fire weather conditions within the zone. To reduce the likelihood of: Crown fire development within the zone, and/or Spot fire ignition potential from the zone.	Zone width related to suppression objectives and dependent upon: - Topography - Aspect - Spotting propensity - Location of adjacent firebreaks - Mosaic pattern of treatment Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this plan. Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFZA has an OFH of less than high.
Land Management Zone	To meet relevant land management objectives in areas where APZs or SFZAs are not appropriate.	As per the land management and fire protection objectives of the responsible land management agency. To reduce the likelihood of spread of fires. To undertake mosaic burning	As appropriate to achieve land management e.g. heritage and/or fire protection e.g. broad scale mosaic burning objectives.
Fire Exclusion Zone	To exclude bush fires.	N/A	Variable dependent on size of fire sensitive area requiring protection.

BFMC Overview - Map Display Area
Map 10 of 10

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Blue Mountains Bush Fire Management Committee (BFMC) pursuant to section 52 of the *Rural Fires Act 1997*.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

- The objectives of this BFRMP are to:
- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
 - manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
 - reduce the community's vulnerability to bush fires by improving its preparedness; and
 - effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Blue Mountains BFMC, covering the local government area of the Blue Mountains. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

Review
Under the *Rural Fires Act 1997* this plan must be reviewed and updated within each successive five year period following the constitution of the BFMC. The Blue Mountains BFMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

Assets
This BFRMP identifies the assets that are considered by the Blue Mountains BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFMC area identified as requiring treatments are listed in the assets table. Other assets within the BFMC area that were assessed as not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number "NA" denotes non-spatial assets.

Treatments
Specific treatments assigned to assets in the Blue Mountains BFMC area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFMC wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFMC area are:

- reviewing the bush fire prone land map;
- ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
- using the Local Environment Plans (LEPs) to control development in areas with a bush fire risk;
- varying the standard bush fire danger period as required;
- requiring permits during bush fire danger periods
- prosecution of arsonists/offenders
- investigation of bush fire cause;
- normal fire suppression activities;
- assessing and managing compliance with strategic fire-fighting resource allocation management systems;
- preparation of a S2 Operations Coordination Plan;
- fire management plans or plans of management; and
- bush fire hazard complaints.

Note on LMZ. All areas not specifically mapped as an APZ, SFAZ or FEZ are considered as LMZ for this risk management plan. For areas identified by an LMZ polygon on the map, please refer to the BFRMP document for the specific land management objectives.

Zone	Purpose	Suppression Objective(s)	Zone characteristics
Asset Protection Zone	To protect human life, property and highly valued public assets and values.	To enable the safe use of Direct Attack suppression strategies within the zone. To minimise bush fire impacts on undervalued assets.	As per RFS document, Standards for Asset Protection Zones.
Strategic Fire Advantage Zone	To provide strategic areas of fire protection advantage which will reduce the spread and intensity of bush fires, and reduce the potential for spot fire development. To all containment of wildfires to existing management boundaries.	To improve the likelihood and safe use of: Parallel Attack suppression strategies within the zone. Indirect Attack (back burning) in high to very high fire weather conditions within the zone. To reduce the likelihood of: Crown fire development within the zone, and/or Spot fire ignition potential from the zone.	Zone width related to suppression objectives and dependent upon: - Topography - Aspect - Spotting propensity - Location of adjacent firebreaks - Mosaic pattern of treatment Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this zone. Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFAZ has an OFH of less than high.
Land Management Zone	To meet relevant land management objectives in areas where APZs or SFAZs are not appropriate.	To reduce the likelihood of spread of fires. To undertake mosaic burning	As appropriate to achieve land management e.g. heritage and/or fire protection e.g. broad scale mosaic burning objectives.
Fire Exclusion Zone	To exclude bush fires.	N/A	Variable dependent on size of fire sensitive area requiring protection.
