## Authorisation

In accordance with Part 3 Division 4 of the Rural Fires Act 1997, this Plan has been prepared by the Eurobodalla Bush Fire Management Committee and has been endorsed at the BFMC meeting on 7<sup>th</sup> March 2019 for submission to the Bush Fire Coordinating Committee.

### Recommended

Trevor Fletcher

Chairperson

Eurobodalla Bush Fire Management Committee

On behalf of the

NSW Bush Fire Coordinating Committee

## Glossary

**Assets:** anything valued by the community which includes houses, crops, heritage buildings and places, infrastructure, the environment, businesses, and forests, that may be at risk from bush fire.

**Bush Fire:** a general term used to describe fire in vegetation, includes grass fire.

**Bush Fire Hazard:** the potential severity of a bush fire, which is determined by fuel load, fuel arrangement and topography under a given climatic condition.

**Bush Fire Risk:** the chance of a bush fire igniting, spreading and causing damage to the community or the assets they value.

**Bush Fire Risk Management:** a systematic process that provides a range of treatments which contribute to the well-being of communities and the environment, which suffer the adverse effects of wildfire/bush fire.

**Bush Fire Threat:** potential bush fire exposure of an asset due to the proximity and type of a hazard and the slope on which the hazard is situated.

**Consequence:** outcome or impact of a bush fire event.

**Fire-fighting Authorities:** the NSW Rural Fire Service, NSW Fire Brigades, the National Parks and Wildlife Service and Forests NSW.

**Likelihood:** the chance of a bush fire igniting and spreading.

**Major Bush Fire:** A bush fire which requires the attendance of multiple brigades, or causes damage to property or injury to one or more persons.

**Display area:** geographic area determined by the Bush Fire Management Committee which is used to provide a suitable area and scale for community participation and mapping display purposes.

**Recovery costs:** the capacity of an asset to recover from the impacts of a bush fire.

**Risk Acceptance:** an informed decision to accept the consequences and the likelihood of a particular risk.

**Risk Analysis:** a systematic process to understand the nature of and to deduce the level of risk.

**Risk Assessment:** the overall process of risk identification, risk analysis and risk evaluation.

**Risk Identification:** the process of determining what, where, when, why, and how something could happen.

**Risk Treatment:** the process of selection and implementation of measures to modify risk.

**Vulnerability:** the susceptibility of an asset to the impacts of bush fire.

# Chapter 1. Introduction

---

## 1.1 Background

Under the *Rural Fires Act 1997* the Bush Fire Coordinating Committee (BFCC) must constitute a Bush Fire Management Committee (BFMC) for each area in the State, which is subject to the risk of bush fires. Each BFMC is required to prepare and submit to the BFCC a draft Bush Fire Risk Management Plan (BFRMP).

A BFRMP is a strategic document that identifies community assets at risk and sets out a five-year program of coordinated multi-agency treatments to reduce the risk of bush fire to the assets. Treatments may include such things as hazard reduction burning, grazing, community education, fire trail maintenance and establishing community fireguard groups.

Annual programs to implement the treatments identified in this plan will be undertaken by the relevant land managers and fire-fighting authorities.

In exercising its functions under the *Rural Fires Act 1997*, including the preparation of a draft bush fire risk management plan, the Eurobodalla BFMC is required to have regard to the principles of ecologically sustainable development (ESD).

This document and the accompanying maps together form the BFRMP for the Eurobodalla BFMC area.

This BFRMP has been prepared by the Eurobodalla BFMC and covers both public and private lands. This BFRMP must be reviewed and updated within each successive five-year period from the constitution of the BFMC.

The BFCC recognises that climate change has the potential to increase bush fire risk. The risk assessment process applied in this BFRMP is based on current climatic conditions. The BFCC will monitor information on climate change and will modify the process when necessary.

## 1.2 Aim and Objectives

The **aim** of this BFRMP is to minimise the risk of adverse impact of bush fires on life, property and the environment.

The **objectives** of this BFRMP are to:

- reduce the number of human-induced bush fire ignitions that cause damage to life, property and the environment;
- manage fuel to reduce the rate of spread and intensity of bush fires, while minimising environmental/ecological impacts;
- reduce the community's vulnerability to bush fires by improving its preparedness; and
- effectively contain fires with a potential to cause damage to life, property and the environment.

## **1.3 Description of the Eurobodalla BFMC Area**

### **1.3.1 Location and land tenure**

The Eurobodalla BFMC area is located on the South East coast of New South Wales and includes the Local Government Area of Eurobodalla. The Eurobodalla Shire is 280km from Sydney, 760km from Melbourne and 150km from Canberra. It is approximately 110km in length and 50km in width.

Most of the area consists of uninhabited mountains and hills which fall from the rim of the plateau of the Southern Tablelands at about 1000 - 1100m above sea level to a narrow coastal lowland where settlement and economic activity are concentrated.

The area covered by the Eurobodalla BFMC is 342,173 hectares and includes the land tenures outlined in Table 1.1.

<b>Land Manager</b>	<b>% of BFMC area</b>
National Parks & Wildlife Service	41.07
Forests NSW	30.9
Local Government	0.98
Crown Land	5.26
All other	21.79

**Table 1.1 Land Tenure**

### **1.3.2 Climate and bush fire season**

The typical climate in the Eurobodalla BFMC area is temperate and rainfall is not predominantly seasonal. The fire season generally commences on 1 September and continues until 31 March. Dry winter and spring seasons are not infrequent on the Far South Coast bringing an early start to the fire season. This can be followed by rain in February/March which tends to bring an end to the worst of the bushfire danger. Spring rains can also be followed by rapid drying of pastures and bush, in the summer months. On occasion the Shire is subject to very high temperatures and low humidity. Such conditions can last for days in succession. During the bushfire danger period we can expect numerous dry lightning storms with minimal rainfall. Very strong and dry hot winds are often experienced in the Shire. Winds of concern are from the north west and west. Southerly changes following hot westerly winds have also been a problem. Coastal areas are also subject to the influence of a north east sea breeze but this is usually associated with higher humidity.

Prolonged drought conditions are another climatic factor affecting the Shire. The central and northern areas of the Shire can be much drier than the Southern areas at times. The terrain extends from the coast to the mountainous escarpment with elevations over 1100m resulting in a variety of weather conditions across the landscape that can be difficult to forecast. All the coastal towns abut onto the coastal range.

The onset of low rainfall may be predicted from analysis of the trends of the Southern Oscillation Index and bush fire behaviour can correlate to a degree with these times particularly in the escarpment areas.

Extreme fire seasons are determined largely by the incidence of strong, hot, westerly wind blowing from the centre of the continent during drought conditions.

The combination of weather conditions with topography, access, forest type and fuel loads make the South Coast, particularly susceptible to severe bush fire seasons. Most of the Eurobodalla Shire has been burnt by high intensity bush fires.

### **1.3.3 Population and demographic information**

The population of the Eurobodalla BFMC area is approximately 38,083 people (2017 census figures). The major population centres are Moruya, Batemans Bay, Narooma/Dalmeny and Tuross.

The area experiences a major tourist influx during the fire danger period. This influx is mostly concentrated in coastal towns and involves recreation in forested areas with increased fire risks. The unfamiliar territory and lack of fire knowledge amongst this holiday population potentially impacts on the ability of the community to prepare themselves for bush fire. Seventy-two percent of the Shire area is vested in the management of Forests NSW and the National Parks & Wildlife Service. Coastal towns are expanding faster than hinterland counterparts and expand either along the coast, by increased density or into surrounding rural or bushland areas. Where inland development has occurred it is usually rural residential, with forested areas adjacent. The population increase and demographic change can result in a less fire aware community.

### **1.3.4 History of bush fire frequency and ignition cause**

Historically, the Eurobodalla BFMC area has on average 60 bushfires a year of which three to four can be considered significant. Major fires in extreme conditions are rare but can be devastating.

The most significant and devastating fires in the region occurred during the summer of 2019-20. From late November the Currowan Fire in the Shoalhaven Local Government Area pushed relentlessly southwards and the southern component of this fire became known as the Clyde Mt fire as it became established in the northern end of the Eurobodalla LGA. New fires that started in the western areas of the LGA were not able to be contained prior to extreme weather events which resulted in the rapid escalation of fire behaviour and spread. The fires of the 2019-20 fire season consumed over 200,00ha of mainly forested land and destroyed more than 500 homes. There has been already been much written about these fires and several research projects have commenced. The findings of this research will inform fire management in the future.

During the previous 50 years, at least 11 devastating fires have occurred in the area. The fires of 1939 and 1952 are generally regarded as having been the most widespread, but those of 1927-28, 1953 and 1968, did major damage over more localised areas. More recently major fires in 1994 burnt in urban interface areas around Batemans Bay and North Moruya. In 2002 fires burnt a large portion of the more remote areas of the Eurobodalla around the Deua River. Most of the severe outbreaks have occurred when fires, which had been burning steadily for a long time, spread rapidly with the advent of conditions of high fire danger. In general, this has occurred when the spring dry, failed to break, as happened in 1968, or when a wet spring has been followed by a dry summer, as happened in 1939 and 1952. The most

common direction of fire travel is from the west towards the coast, posing a serious threat to coastal settlements and more remote areas.

The coastal lowlands house most of the population and smaller high intensity fires in this area can pose a greater threat than much larger fires in the more remote areas to the west.

Preventing the ignition of bush fires by human activities, particularly on days when severe weather conditions prevail, is an important strategy for managing bush fires. To put effective ignition management programs in place, it is important to understand the patterns and major sources of ignition in the area.

The major ignition sources within the Eurobodalla Shire Fire District are:

- **Negligence/Accidental**

New residents and non-fire aware visitors do not understand fire behaviour especially around new developments. Erratic weather patterns early in the fire season can compound this problem.

- **Legal Burns – late Winter/Spring**

Frosted dry grass and warm breezy weather producing fire behaviour more lively than expected, result in fire escapes throughout the rural areas of the Shire at the end of the Hazard Reduction season.

- **Arson**

Arson is an increasing problem, particularly around coastal towns.

- **Lightning**

Lightning can be a major problem especially during drought conditions with summer heat and dry storms. Dry hollow trees can catch alight and smoulder for indefinite periods.

- **Power Lines**

Windy Weather periodically causes clashing of power lines or power poles to be brought down by falling trees, resulting in a fire.

## Chapter 2. Identifying and Assessing the Bush Fire Risk

### 2.1 Process

The Australia/New Zealand Standard *AS/NZS 4360: 2004 Risk Management* was used as the basis for the risk assessment process. See Figure 2.1 for the steps involved. For a detailed description of the process undertaken see the Bush Fire Risk Management Planning Guidelines for Bush Fire Management Committees on the RFS website: [www.rfs.nsw.gov.au](http://www.rfs.nsw.gov.au).

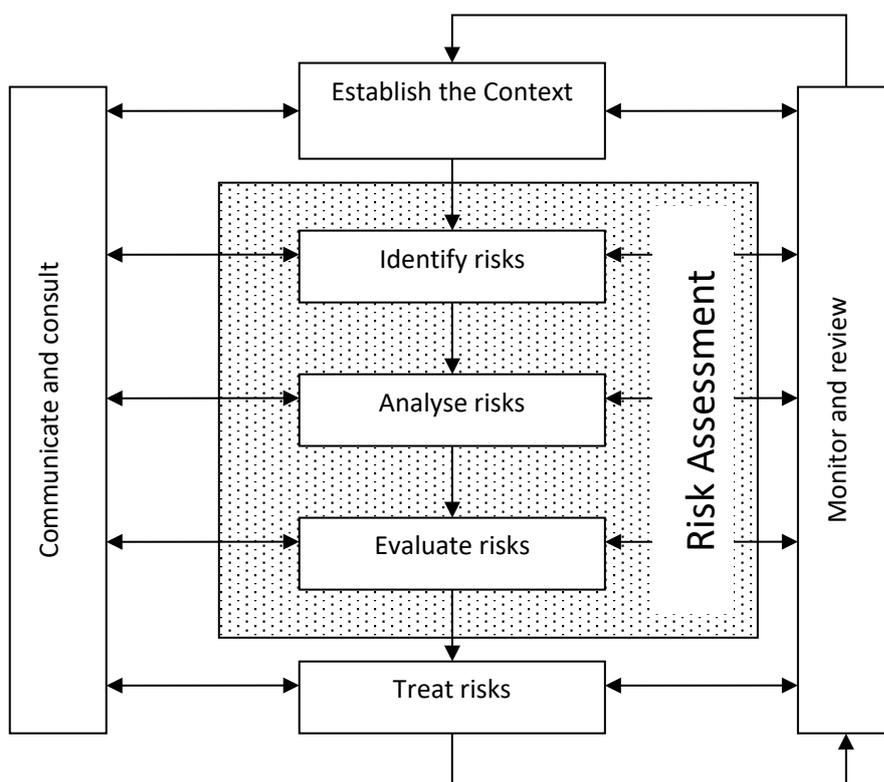

Figure 2.1 Overview of the risk assessment process

### 2.2 Communication and Consultation

Community participation is an integral part of risk management. The Community Participation Strategy involved developing and implementing a process to address the needs, issues and concerns of stakeholders within the BFMC area in regards to the BFRMP. See Appendix 1 for the Community Participation Strategy used by the Eurobodalla BFMC in preparing this BFRMP.

### 2.3 Identifying the Bush Fire Risk

Identifying the level of bush fire risk firstly involved identifying important community assets considered to be at risk from bush fire in the Eurobodalla BFMC area, and then assessing the likelihood and consequence ratings.

### **2.3.1 Assets**

BFMC members and the community, including RFS volunteers, identified assets within the Eurobodalla BFMC that they believed were at risk of bush fire.

The assets were divided into four asset types:

#### **Human settlement**

- Residential areas including urban bushland interface areas and rural properties;
- Special Fire Protection areas including schools, hospitals, nursing homes, and tourist facilities; and
- Other human settlement areas including commercial and industrial areas where distinct from major towns.

#### **Economic**

- Agricultural; e.g. major silos, regional saleyards, cropping/grazing land;
- Commercial/industrial e.g. major industries, waste treatment plants, sawmills;
- Infrastructure e.g. large power lines, gas and oil pipelines, railway lines, electricity substations, communication facilities;
- Tourist and recreational e.g. tourist sites and facilities, resorts, retreats;
- Mines;
- Commercial forests e.g. pine plantations, eucalypt plantations and commercial native forests; and
- Drinking water catchments.

#### **Environmental**

- Threatened species, populations and ecological communities and Ramsar wetlands; and
- Locally important species and ecological communities, such as species and ecological communities especially sensitive to fire.

#### **Cultural**

- Aboriginal significance – Aboriginal places and items of significance exist throughout the Shire including along the edges of lakes and water-courses where food utilisation was likely and along ridgelines which formed movement pathways. The area is likely to have been settled and tracked by Aboriginal people for thousands of years. An AHIMS (DECC data base) search for site records was undertaken for the general area and numerous sites that could be impacted by bush fire were identified, including scarred trees, artefact scatters and places of burial.

Potential areas of Aboriginal significance include:

- Areas within 40m of a stream, lake or lagoon.
- Landscape features such as sandstone outcrops, rock shelters and overhangs, old growth trees and sand bodies/dune systems,
- Any area not disturbed by urban development,

Other areas of importance to Aboriginal people such as art sites, story places, movement pathways, places of burial, spiritual significant areas are just a few of the sites Aboriginal people are interested in preserving.

These sites were addressed where identified as important in relation to fire, however, no comprehensive detailed survey has been done. It is also considered that the risk of hazard reduction activities may outweigh the protection provided against wildfire in most cases. Local consultation is important when managing hazard reduction in the Eurobodalla.

- Non-indigenous heritage – places and items arising from the early occupation of NSW by European or other non-indigenous settlers; and
- Other cultural assets – community halls, clubs and recreational facilities.

See Appendix 2 for the full list of assets identified in the Eurobodalla BFMC area. See maps 1-5 for the location of assets to be treated under this BFRMP.

### **2.3.2 Assessing the bush fire risk - Consequence**

Once the assets were identified, the consequence of a bush fire impacting on these assets was assessed.

See Appendix 2 for the consequence ratings assigned to each asset identified in the Eurobodalla BFMC area.

The different asset types had different assessment processes used to determine the consequence. These processes are identified below.

#### **Human settlement**

A potential fire behaviour model using vegetation type, slope and separation distance was used to produce a threat rating for human settlement assets. The vulnerability of the asset to a bush fire was also assessed and a rating assigned. These ratings were then used to assess the consequence of a bush fire impacting upon a human settlement asset.

Special Fire Protection (SFP) assets were considered inherently more vulnerable to bush fire due to mobility capacity, knowledge or other issues relating to their inhabitants, (e.g. the elderly, infirm, children or tourists) and therefore stricter requirements for vulnerability assessment and rating were applied.

#### **Economic**

The level of economic impact e.g. local, regional or state, as well as the economic recovery costs (how long and complicated a financial recovery will be) of the asset were identified. These ratings were used to assess the consequence of a bush fire impacting upon an economic asset.

#### **Environmental**

Environmental assets with known minimum fire threshold were assessed to determine if they were at risk of a bush fire within the five year life of the BFRMP using fire history and fire threshold data. Those environmental assets which were within or above the fire threshold were not assessed in the BFRMP, as the negative impact of a fire within the five year period was determined as being low and may even be of benefit to the asset and surrounding habitat.

The vulnerability of an environmental asset was determined by its conservation status and its geographic extent (distribution across the landscape). Vulnerability and potential impact of bush fire were used to assess the consequence of a bush fire impacting upon an environmental asset.

## **Cultural**

For non-indigenous historical, Aboriginal and other cultural assets a potential fire behaviour model using fuel load, slope and proximity was used to produce a threat rating. The physical vulnerability of the asset to a bush fire was also assessed. These ratings were then used to assess the consequence of a bush fire impacting upon a cultural asset.

### **2.3.3 Assessing the bush fire risk - Likelihood**

For all asset types the likelihood of a bush fire occurring was assessed. This involves considering fire history, including ignition cause and patterns, known fire paths, access, containment potential and potential fire run (size of the vegetated area). See Appendix 2 for the likelihood ratings assigned to each asset identified in the Eurobodalla BFMC area.

### **2.3.4 Identifying the level of risk**

The consequence and likelihood ratings were then used to identify the level of risk. See Appendix 2 for the risk ratings assigned to each asset identified in the Eurobodalla BFMC area.

### **2.3.5 Evaluating the bush fire risk**

Once the risk ratings for each asset were identified, they were evaluated to:

- confirm that risk levels identified in the risk analysis process are appropriate and reflect the relative seriousness of the bush fire risk;
- identify which assets require treatments; and
- identify treatment priorities.

### **2.3.6 Prioritising Treatments**

No organisation has limitless resources to deal with adverse risk. It is therefore necessary to define priorities. The bush fire risk ratings determined were used to prioritise the risk treatments, i.e. areas of extreme risk were considered first for treatment, then very high, then high then medium then low.

### **2.3.7 Risk Acceptability**

Risks below a certain level were assessed as not requiring treatment within the life of this plan. This is due to a combination of risk priority and capacity to undertake the works. Within the Eurobodalla BFMC area the level of acceptability is medium. Areas of medium and low risk assets are likely to be managed by routine and legislated procedures and so do not require a specific application of resources. Where possible and practicable the BFMC will also develop strategies to mitigate ephemeral risks as they arise.

Cultural and environmental assets are often more difficult to treat at a strategic level due to challenges with the identification of asset locations and the risks associated with implementing mitigation strategies. In this instance only those environmental assets with a risk rating of very high or above have been assigned specific treatments. The BFMC will

periodically review protocols around the protection of these assets to ensure the best use of available knowledge.

## Chapter 3. Treating the Risk

### 3.1 Bush Fire Management Zones

Bush Fire Management Zones were identified within the Eurobodalla BFMC area and mapped (see maps 1-7). These zones identify the fire management intent for a specific area. See Table 3.1 for descriptions of the zones and their purposes. The four categories of Bush Fire Management Zones are:

- Asset Protection Zone (APZ);
- Strategic Fire Advantage Zone (SFAZ);
- Land Management Zone (LMZ); and
- Fire Exclusion Zone (FEZ).

Zone	Purpose	Suppression Objective(s)	Zone characteristics
<b>Asset Protection Zone</b>	To protect human life, property and highly valued public assets and values.	To enable the safe use of <b>Direct Attack</b> suppression strategies within the zone.  To minimise bush fire impacts on undefended assets.	As per RFS document <i>Standards for Asset Protection Zones</i> .
<b>Strategic Fire Advantage Zone</b>	To provide strategic areas of fire protection advantage which will reduce the speed and intensity of bush fires, and reduce the potential for spot fire development;  To aid containment of wildfires to existing management boundaries.	To improve the likelihood and safe use of:  <b>Parallel Attack</b> suppression strategies within the zone.  and/or  <b>Indirect Attack</b> (back burning) in high to very high fire weather conditions within the zone.  To reduce the likelihood of:  Crown fire development within the zone.  and/or  Spot fire ignition potential from the zone.	Zone width related to suppression objectives and dependent upon:  Topography  Aspect  Spotting propensity  Location of adjacent firebreaks  Mosaic pattern of treatment  Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this plan.  Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFAZ has an OFH of less than high.
<b>Land Management Zone</b>	To meet relevant land management objectives in areas where APZs or SFAZs are not appropriate.	As per the land management and fire protection objectives of the responsible land management agency.  To reduce the likelihood of spread of fires.  To undertake mosaic burning.	As appropriate to achieve land management e.g. heritage and/or fire protection e.g. broad scale mosaic burning objectives.
<b>Fire Exclusion Zone</b>	To exclude bush fires.	N/A	Variable dependant on size of fire sensitive area requiring protection.

Table 3.1 Bush Fire Management Zones: Purpose, objectives and characteristics

NB: OFH refers the Overall Fuel Hazard Guide as described in the document published by (Dept. of Sustainability and Environment 3<sup>rd</sup> ed. 1999 & NPWS version); State-wide procedures for assessment of fuel hazard will be developed in conjunction with the BFCC.

**Note:** All areas that are not mapped, or described, as APZs or SFAZs are considered to be LMZs.

The scope of this plan does not allow for the detailed mapping of all prescribed APZs. For developments initiated after the introduction of *Planning for Bush Fire Protection* (PBP) details of any prescribed APZ should be found in the relevant approval documents.

Developments prior to the introduction of PBP will have APZ distances as prescribed in *Bush Fire Protection for Existing Development (2016)*.

Mapped APZs on public land are indicative and not intended to show the scope or extent of works. These APZs are valid for the life of the plan and should not necessarily be taken into account for development control purposes.

For the purpose of the Bush Fire Environmental Assessment Code:

1. Plantations that are approved under the *Plantations & Reafforestation Act 1999* after closure of the public exhibition period for this BFRMP are considered to be identified in this BFRMP; and
2. Retained vegetation within the aforementioned plantations is considered to be a Strategic Fire Advantage Zone identified in the text of this BFRMP as long as it meets the suppression objectives for SFAZs included in the BFRMP, and is not mapped or otherwise described as a Fire Exclusion Zone in the BFRMP.

### **3.2 BFMC Wide Treatments**

BFMC wide treatments are activities which reduce the overall bush fire risk within the BFMC area and are undertaken on an ongoing basis as part of normal business. These treatments are not linked to specific assets in the BFRMP, rather they are applied across all or part of the BFMC area as designated by legislation or agency policy. BFMC wide treatments include the following:

- **Reviewing the bush fire prone land map**

These maps identify bush fire prone land and are used to trigger whether a development application is assessed using *Planning for Bush Fire Protection*<sup>1</sup>.

- **Ensuring developments in bush fire prone land comply with *Planning for Bush Fire Protection*<sup>1</sup>.**

This assessment process requires new applications for development to include bush fire protection measures.

- **Using the Local Environment Plan/s (LEPs) to control developments in areas with a bush fire risk**

---

<sup>1</sup> NSW Rural Fire Service 2006 *Planning for Bush Fire Protection: A guide for councils, planners, fire authorities and developers*.

LEPs can be used to exclude development in extreme bush fire risk areas or where bush fire protection measures cannot be incorporated.

- **Varying the standard bush fire danger period as required**

In years where the weather is particularly adverse the bush fire danger period may be brought in early or extended. This is assessed every year by the BFMC.

- **Requiring permits during the bush fire danger period**

In the bush fire danger period a fire safety permit is required to light a fire in the open. Permits specify conditions such as fire-fighting equipment that must be on site, or restrict burns based on weather conditions.

- **Prosecution of offenders in relation to deliberate ignitions**

Under the *Rural Fires Act 1997* persons may be prosecuted for breaching the conditions on a fire permit, lighting a fire during a Total Fire Ban, allowing fire to escape their property, or other breaches of the Act.

The member agencies of the BFMC will co-operate with the NSW Police in relation to the prosecution of arsonists under the Crimes Act 1900.

- **Investigation of bush fire cause**

All bush fires which do not have a known cause are investigated to identify how they started.

- **Normal fire suppression activities**

Responding to bush fire is a normal business activity for the fire-fighting authorities.

- **Assessing and managing compliance with strategic fire-fighting resource allocation provisions**

Strategic fire-fighting resource allocation provisions is the process used to identify the number of stations, brigades and appliances required in an area, and considers members, training, assets and hazards.

- **Preparation of a S52 Operations Coordination Plan**

The Operations Coordination Plan is prepared biannually and sets out how coordinated fire-fighting will occur. It includes specific operational restrictions on fire-fighting techniques in certain areas, where fires will be managed from, and how agencies involved can communicate during operations.

- **Fire Management Plans or Plans of Management**

Some land management agencies have developed fire management plans or plans of management with specific fire or fuel management strategies, for example a Forests NSW Regional Fuel Management Risk Plan, a NPWS Fire Management Strategy. These publicly exhibited plans form the basis for operational fire planning on public parks, reserves and forests.

- **Bush Fire Hazard Complaints**

If someone is concerned about possible bush fire hazards on a neighbouring property or any other land, then this can be reported to the RFS Commissioner or their local RFS

Fire Control Centre. The complaint will be investigated and may result in a notice being issued to the landowner or manager to reduce the hazard.

### 3.3 Asset Specific Treatments

There are five broad strategy groups available to treat the bush fire risk to assets identified in the BFRMP.

The types of asset specific treatments in each strategy group used in the Eurobodalla BFMC area are listed below. A full list of the treatment strategies in the Eurobodalla BFMC area are in Appendix 3.

Strategy	Examples of treatments used in the Eurobodalla BFMC area
Ignition Management	Operate fire towers on days with elevated fire risk. Enforce Agency policy re campfires on public land. Consider access restrictions where appropriate. Suspend fire generating activities on days of very high to extreme fire danger. Local fire permit arrangements.
Hazard Reduction	Maintain APZ around assets. Monitor and maintain SFAZ to prescribed standards.
Community Education	Targeted community engagement to support property preparation and Survival Planning. Provide information on campfires and associated restrictions.
Property Planning	Facilitate workshops to assist landholders to plan and prepare their properties.
Preparedness	Ensure effective Emergency Management Guidelines are in place. Maintain Fire trails and fire access to standards. Develop Emergency Management Plan for campgrounds. Develop and implement Fire Access and Fire Trail (FAFT) plan.

**Table 3.2 Asset specific treatments used in the Eurobodalla BFMC area**

### 3.4 Fire Thresholds

The vegetation in the Eurobodalla BFMC area was classified into fire threshold categories (Table 3.3).

Vegetation formation	Minimum SFAZ Threshold	Minimum LMZ Threshold	Maximum Threshold	Notes
Rainforest	NA	NA	NA	Fire should be avoided.
Alpine complex	NA	NA	NA	Fire should be avoided.
Wet Sclerophyll forest (shrubby sub formation)	25	30	60	Crown fires should be avoided in the lower end of the interval range.
Wet Sclerophyll forest (grassy sub formation)	10	15	50	Crown fires should be avoided in the lower end of the interval range.
Grassy woodland	5	8	40	Minimum interval of 10 years should apply in the southern Tablelands area. Occasional intervals greater than 15 years may be desirable.
Grassland	2	3	10	Occasional intervals greater than 7 years should be included in coastal areas. There was insufficient data to give a maximum interval; available evidence indicates maximum intervals should be approximately 10 years.
Dry sclerophyll forest (shrub/grass sub formation)	5	8	50	Occasional intervals greater than 25 years may be desirable.
Dry sclerophyll forest (shrub sub formation)	7	10	30	Occasional intervals greater than 25 years may be desirable.
Heathlands	7	10	30	Occasional intervals greater than 20 years may be desirable.
Freshwater wetlands	6	10	35	Occasional intervals greater than 30 years may be desirable.
Forested wetlands	7	10	35	Some intervals greater than 20 years may be desirable.
Saline wetlands	NA	NA	NA	Fire should be avoided.
Semi-arid woodlands (grassy sub formation)	6	9	No max	Not enough data for a maximum fire interval.
Semi-arid woodlands (shrubby sub formation)	10	15	No Max	Not enough data for a maximum fire interval.
Arid shrublands (chenopod sub formation)	NA	NA	NA	Fire should be avoided.
Arid shrublands (acacia sub formation)	10	15	No Max	Not enough data for a maximum fire interval.

**Table 3.2 Fire Thresholds for Vegetation Categories**

### **3.5 Annual Works Programs**

The land management agencies and fire-fighting authorities responsible for implementing the treatments identified in this plan will include those treatments in their annual works programs detailing how, when, and where the required activities will be undertaken.

### **3.6 Implementation**

When the treatments identified in this BFRMP are implemented there are a number of issues that need to be considered by the responsible agency including environmental assessments and approvals, smoke management and prescribed burn plans.

#### **Local permit issuing/hazard reduction burning exclusion periods**

In the Eurobodalla BFMC area the issuing of permits is required between September and March each year.

## **Chapter 4      Performance Monitoring and Reviewing**

---

### **4.1    *Review***

This BFRMP must be reviewed and updated within each successive five-year period from the constitution of the BFMC. The Eurobodalla BFMC will also review this plan as necessary to account for any changes in context or risk. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

### **4.2    *Monitoring***

The BFMC is required to monitor progress towards the completion of treatment works listed in the BFRMP, and the timeliness of the works.

### **4.3    *Reporting***

The BFMC is required to report annually to the BFCC on its progress in implementing the bush fire risk management activities identified in this plan.

### **4.4    *Performance Measurements***

State wide performance measurements which are linked to the BFRMP have been identified by the BFCC. All BFMCs must use these to monitor and report on their success in reducing the bush fire risk in their BFMC area.

## Appendix 1 Community Participation Strategy

Date	Target Audience	Method of communication	Method of notification	Key messages/purpose	Resources required	Responsibility
17/11/15	All	Public Kiosk –Malua Bay	Paper, ABC radio, Local Brigade, ESC website, social media	BFRMP and works on all land tenure	RFS, FNSW, NPWS, Council & Lands Staff as appropriate	BFMC
18/11/2015	All	Public Kiosk –Bodalla	Paper, ABC radio, Local Brigade, ESC website, social media, Nerrigundah website	BFRMP and works on all land tenure	RFS, FNSW, NPWS, Council & Lands Staff as appropriate	BFMC
19/11/2015	All	Public Kiosk - Dalmeny	Paper, ABC radio, Local Brigade, ESC website, social media	BFRMP and works on all land tenure	RFS, FNSW, NPWS, Council & Lands Staff as appropriate	BFMC
24/11/2015	All	Public Kiosk –Long Beach	Paper, ABC radio, Local Brigade, ESC website, social media	BFRMP and works on all land tenure	RFS, FNSW, NPWS, Council & Lands Staff as appropriate	BFMC
25/11/2015	All	Public Kiosk -Moruya	Paper, ABC radio, Local Brigade, ESC website, social media	BFRMP and works on all land tenure	RFS, FNSW, NPWS, Council & Lands Staff as appropriate	BFMC
26/11/2015	All	Public Kiosk –Deua River	Paper, ABC radio, Local Brigade, ESC website, social media	BFRMP and works on all land tenure	RFS, FNSW, NPWS, Council & Lands Staff as appropriate	BFMC

# Eurobodalla BFMC Bush Fire Risk Management Plan 2020

## North - Map Display Area Map 1 of 5

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Eurobodalla Bush Fire Management Committee (BFMC) pursuant to section 52 of the *Rural Fires Act 1997*.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

- The objectives of this BFRMP are to:
- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
  - manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
  - reduce the community's vulnerability to bush fires by improving its preparedness; and
  - effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Eurobodalla BFMC, covering the local government area(s) of Eurobodalla. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

**Review**  
Under the *Rural Fires Act 1997* this plan must be reviewed and updated within each successive five year period following the constitution of the BFMC. The Eurobodalla BFMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

**Assets**  
This BFRMP identifies the assets that are considered by the Eurobodalla BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFMC area identified as requiring treatments are listed in the assets table. Other assets within the BFMC area that were assessed as not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number "NA" denotes non-spatial assets.

**Treatments**  
Specific treatments assigned to assets in the Eurobodalla area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFMC wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFMC area are:

- reviewing the bush fire prone land map;
- ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
- using the Local Environment Plans (LEPs) to control development in areas with a bush fire risk;
- waiving the standard bush fire danger period as required;
- requiring permits during bush fire danger periods
- prosecution of arsonists/offenders
- investigation of bush fire cause;
- normal fire suppression activities;
- assessing and managing compliance with strategic fire-fighting resource allocation management systems;
- preparation of a S2 Operations Coordination Plan;
- fire management plans or plans of management; and
- bush fire hazard complaints.

Note on LMZ: All areas not specifically mapped as an APZ, SFAZ or FEZ are considered as LMZ for this risk management plan. For areas identified by an LMZ polygon on the map, please refer to the BFRMP document for the specific land management objectives.

Zone	Purpose	Suppression Objective(s)	Zone characteristics
<b>Asset Protection Zone</b>	To protect human life, property and highly valued public assets and values.	To enable the safe use of <b>Direct Attack</b> suppression strategies within the zone. To minimise bush fire impacts on undervalued assets.	As per RFS document, Standards for Asset Protection Zones.
<b>Strategic Fire Advantage Zone</b>	To provide strategic areas of fire protection advantage which will reduce the spread and intensity of bush fires, and reduce the potential for spot fire development. To aid containment of wildfires to existing management boundaries.	To improve the likelihood and safe use of: <b>Parallel Attack</b> suppression strategies within the zone. <b>Indirect Attack</b> (back burning) in high to very high fire weather conditions within the zone. To reduce the likelihood of: Green fire development within the zone, and/or Spot fire ignition potential from the zone.	Zone width related to suppression objectives and dependent upon: - Topography - Aspect - Spotting propensity - Location of adjacent freeways - Mosaic pattern of treatment Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this plan. Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFAZ has an OFH of less than high.
<b>Land Management Zone</b>	To meet relevant land management objectives in areas where APZs or SFAZs are not appropriate.	To reduce the likelihood of spread of fires. To undertake mosaic burning	As appropriate to achieve land management e.g. heritage and/or fire protection e.g. broad scale mosaic burning objectives.
<b>Fire Exclusion Zone</b>	To exclude bush fires.	N/A	Variable dependent on size of fire sensitive area requiring protection.

# Eurobodalla BFMC Bush Fire Risk Management Plan 2020

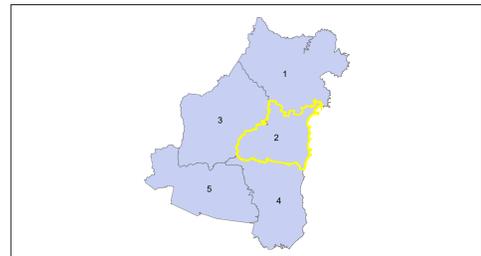

East - Map Display Area  
Map 2 of 5

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Eurobodalla Bush Fire Management Committee (BFMC) pursuant to section 52 of the *Rural Fires Act 1997*.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

- The objectives of this BFRMP are to:
- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
  - manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
  - reduce the community's vulnerability to bush fires by improving its preparedness; and
  - effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Eurobodalla BFMC, covering the local government area(s) of Eurobodalla. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

**Review**  
Under the *Rural Fires Act 1997* this plan must be reviewed and updated within each successive five year period following the constitution of the BFMC. The Eurobodalla BFMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

**Assets**  
This BFRMP identifies the assets that are considered by the Eurobodalla BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFMC area identified as requiring treatments are listed in the assets table. Other assets within the BFMC area that were assessed as not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number "NA" denotes non-spatial assets.

**Treatments**  
Specific treatments assigned to assets in the Eurobodalla area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFMC wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFMC area are:

- reviewing the bush fire prone land map;
- ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
- using the Local Environment Plans (LEPs) to control development in areas with a bush fire risk;
- varying the standard bush fire danger period as required;
- requiring permits during bush fire danger periods
- prosecution of arsonists/offenders
- investigation of bush fire cause;
- normal fire suppression activities;
- assessing and managing compliance with strategic fire-fighting resource allocation management systems;
- preparation of a S2 Operations Coordination Plan;
- fire management plans or plans of management; and
- bush fire hazard complaints.

Note on LMZ: All areas not specifically mapped as an APZ, SFAZ or FEZ are considered as LMZ for this risk management plan. For areas identified by an LMZ polygon on the map, please refer to the BFRMP document for the specific land management objectives.

# Eurobodalla BFMC Bush Fire Risk Management Plan 2020

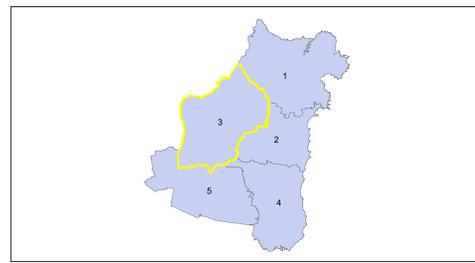

## West - Map Display Area Map 3 of 5

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Eurobodalla Bush Fire Management Committee (BFMC) pursuant to section 52 of the *Rural Fires Act 1997*.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

- The objectives of this BFRMP are to:
- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
  - manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
  - reduce the community's vulnerability to bush fires by improving its preparedness; and
  - effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Eurobodalla BFMC, covering the local government area(s) of Eurobodalla. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

**Review**  
Under the *Rural Fires Act 1997* this plan must be reviewed and updated within each successive five year period following the constitution of the BFMC. The Eurobodalla BFMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

**Assets**  
This BFRMP identifies the assets that are considered by the Eurobodalla BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFMC area identified as requiring treatments are listed in the assets table. Other assets within the BFMC area that were assessed as not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number "NA" denotes non-spatial assets.

- Treatments**  
Specific treatments assigned to assets in the Eurobodalla area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFMC wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFMC area are:
- reviewing the bush fire prone land map;
  - ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
  - using the Local Environment Plans (LEPs) to control development in areas with a bush fire risk;
  - varying the standard bush fire danger period as required;
  - requiring permits during bush fire danger periods
  - prosecution of arsonists/offenders
  - investigation of bush fire cause;
  - normal fire suppression activities;
  - assessing and managing compliance with strategic fire-fighting resource allocation management systems;
  - preparation of a S2 Operations Coordination Plan;
  - fire management plans or plans of management; and
  - bush fire hazard complaints.

Note on LMZ. All areas not specifically mapped as an APZ, SFAZ or FEZ are considered as LMZ for this risk management plan. For areas identified by an LMZ polygon on the map, please refer to the BFRMP document for the specific land management objectives.

# Eurobodalla BFMC Bush Fire Risk Management Plan 2020

## South - Map Display Area Map 4 of 5

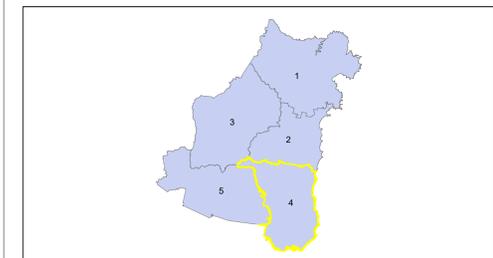

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Eurobodalla Bush Fire Management Committee (BFMC) pursuant to section 52 of the *Rural Fires Act 1997*.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

The objectives of this BFRMP are to:

- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
- manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
- reduce the community's vulnerability to bush fires by improving its preparedness; and
- effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Eurobodalla BFMC, covering the local government area(s) of Eurobodalla. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

**Review**  
Under the *Rural Fires Act 1997* this plan must be reviewed and updated within each successive five year period following the constitution of the BFMC. The Eurobodalla BFMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

**Assets**  
This BFRMP identifies the assets that are considered by the Eurobodalla BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFMC area identified as requiring treatments are listed in the assets table. Other assets within the BFMC area that were assessed as not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number "NA" denotes non-spatial assets.

**Treatments**  
Specific treatments assigned to assets in the Eurobodalla area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFMC wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFMC area are:

- reviewing the bush fire prone land map;
- ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
- using the Local Environment Plans (LEPs) to control development in areas with a bush fire risk;
- varying the standard bush fire danger period as required;
- requiring permits during bush fire danger periods
- prosecution of arsonists/offenders
- investigation of bush fire cause;
- normal fire suppression activities;
- assessing and managing compliance with strategic fire-fighting resource allocation management systems;
- preparation of a S2 Operations Coordination Plan;
- fire management plans or plans of management; and
- bush fire hazard complaints.

Note on LMZ: All areas not specifically mapped as an APZ, SFAZ or FEZ are considered as LMZ for this risk management plan. For areas identified by an LMZ polygon on the map, please refer to the BFRMP document for the specific land management objectives.

Zone	Purpose	Suppression Objective(s)	Zone characteristics
<b>Asset Protection Zone</b>	To protect human life, property and highly valued public assets and values.	To enable the safe use of <b>Direct Attack</b> suppression strategies within the zone. To minimise bush fire impacts on undervalued assets.	As per RFS document, Standards for Asset Protection Zones.
<b>Strategic Fire Advantage Zone</b>	To provide strategic areas of fire protection advantage which will reduce the speed and intensity of bush fires, and reduce the potential for spot fire development. To aid containment of wildfires to existing land management boundaries.	<b>Parallel Attack</b> suppression strategies within the zone, and/or <b>Indirect Attack</b> (back burning) in high to very high fire weather conditions within the zone. To reduce the likelihood of: <b>Crown fire</b> development within the zone, and/or <b>Spot fire</b> ignition potential from the zone.	Zone width related to suppression objectives and dependent upon: - Topography - Aspect - Spotting propensity - Location of adjacent firebreaks - Mosaic pattern of treatment Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this plan. Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFAZ has an OFH of less than high.
<b>Land Management Zone</b>	To meet relevant land management objectives in areas where APZs or SFAZs are not appropriate.	To reduce the likelihood of spread of fires. To undertake mosaic burning	As appropriate to achieve land management objectives e.g. heritage and/or fire protection e.g. broad scale mosaic burning objectives.
<b>Fire Exclusion Zone</b>	To exclude bush fires.	N/A	Variable dependent on size of fire sensitive area requiring protection.

# Eurobodalla BFMC Bush Fire Risk Management Plan 2020

## South West - Map Display Area Map 5 of 5

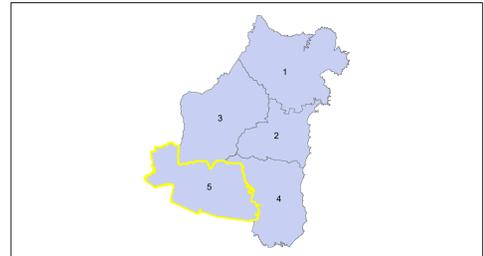

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Eurobodalla Bush Fire Management Committee (BFMC) pursuant to section 52 of the *Rural Fires Act 1997*.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

The objectives of this BFRMP are to:

- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
- manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
- reduce the community's vulnerability to bush fires by improving its preparedness; and
- effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Eurobodalla BFMC, covering the local government area(s) of Eurobodalla. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

**Review**  
Under the *Rural Fires Act 1997* this plan must be reviewed and updated within each successive five year period following the constitution of the BFMC. The Eurobodalla BFMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

**Assets**  
This BFRMP identifies the assets that are considered by the Eurobodalla BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFMC area identified as requiring treatments are listed in the assets table. Other assets within the BFMC area that were assessed as not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number "NA" denotes non-spatial assets.

**Treatments**  
Specific treatments assigned to assets in the Eurobodalla area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFMC wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFMC area are:

- reviewing the bush fire prone land map;
- ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
- using the Local Environment Plans (LEPs) to control development in areas with a bush fire risk;
- varying the standard bush fire danger period as required;
- requiring permits during bush fire danger periods
- prosecution of arsonists/offenders
- investigation of bush fire cause;
- normal fire suppression activities;
- assessing and managing compliance with strategic fire-fighting resource allocation management systems;
- preparation of a S2 Operations Coordination Plan;
- fire management plans or plans of management; and
- bush fire hazard complaints.

Note on LMAZ. All areas not specifically mapped as an APZ, SFAZ or FEZ are considered as LMAZ for this risk management plan. For areas identified by an LMAZ polygon on the map, please refer to the BFRMP document for the specific land management objectives.

Zone	Purpose	Suppression Objective(s)	Zone characteristics
<b>Asset Protection Zone</b>	To protect human life, property and highly valued public assets and values.	To enable the safe use of <b>Direct Attack</b> suppression strategies within the zone. To minimise bush fire impacts on undetected assets.	As per RFS document, Standards for Asset Protection Zones.
<b>Strategic Fire Advantage Zone</b>	To provide strategic areas of fire protection advantage which will reduce the spread and intensity of bush fires, and reduce the potential for spot fire development. To aid containment of wildfires to existing management boundaries.	To improve the likelihood and safe use of: <b>Parallel Attack</b> suppression strategies within the zone. <b>Indirect Attack</b> (back burning) in high to very high fire weather conditions within the zone. To reduce the likelihood of: Crown fire development within the zone. and/or Spot fire ignition potential from the zone.	Zone width related to suppression objectives and dependent upon: - Topography - Aspect - Spotting propensity - Location of adjacent freeways - Mosaic pattern of treatment Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this plan. Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFAZ has an OFH of less than high.
<b>Land Management Zone</b>	To meet relevant land management objectives in areas where APZs or SFAZs are not appropriate.	As per the land management and fire protection objectives of the responsible land management agency. To reduce the likelihood of spread of fires. To undertake mosaic burning	As appropriate to achieve land management e.g. heritage and/or fire protection e.g. broad scale mosaic burning objectives.
<b>Fire Exclusion Zone</b>	To exclude bush fires.	N/A	Variable dependent on size of fire sensitive area requiring protection.

- Assets**
- Human - Residential
  - Human - Other
  - Social Fire Protection
  - Economic - Agricultural
  - Economic - Commercial
  - Economic - Infrastructure
  - Economic - Tourism and Recreational
  - Economic - Mines
  - Commercial Forests
  - Drinking Water Catchments
  - Environmental - Locally Important
  - Environmental - Vulnerable (Species)
  - Environmental - Endangered (Species)
  - Cultural - Aboriginal Heritage
  - Cultural - Other
  - Cultural - Non Indigenous

- Bush Fire Management Zones**
- Fire Exclusion Zone (FEZ)
  - Asset Protection Zone (APZ)
  - Land Management Zone (LMAZ)
  - Strategic Fire Advantage Zone (SFAZ)

- Base Data Layers**
- Major Roads Sealed
  - Major Roads Unsealed
  - Secondary Road Sealed
  - Secondary Road Unsealed
  - Local Road Sealed
  - Local Road Unsealed
  - Local Road Unspecified
  - 4WD Track Unspecified
  - Path
  - Heavy Rail
  - Light Rail
  - Heavy Rail Siding
  - Drainage Potential
  - Drainage Non Potential
  - Hydro-Line Potential
  - Hydro-Line Non Potential
  - Contour (100m)
  - Contour (15m)
  - Map Display Area
  - Local Government Area
  - Crown Land
  - State Forests
  - National Park

\*Note - Some base data layers may not be displayed on map
